REDCLIFF REVIEW

OUR SLOGAN: An Industrial Metropolis of Industrious People Who Pull Together.

Volume 14. THE REDCLIFF REVIEW, THURSDAY, OCT. 1, 1925. Number 40.

C. S. Pingle's Election is Now Almost Certain

IS LEADING BY 422 OVER LABOR CANDIDATE—COUNT WILL GO TO SECOND CHOICE BALLOTS WHICH WILL BE ALLOTTED ON OCTOBER 9th.

There is now little doubt that C. S. Pingle, Liberal candidate in the by-election in Medicine Hat, will be elected. He is now leading by 422 with only a few small outlying polls to hear from. Returns from some of these polls are still coming in and as each one is only making a difference of two or three either way, the present standing will not be very much altered when the complete returns are in. Nine of the late rural polls to report only give McCombe a majority of 21.

In Medicine Hat city both Mr. Pingle and Mr. Hendricks polled a larger vote than the Labor candidate Mr. McCombes.

The standing in the city was:

Pingle	1926
Hendricks	861
McCombes	790

In the rural polls heard from so far the standing is:

Pingle	291
McCombes	196
Hendricks	127

These figures do not include the nine polls heard from late last night. There are still 19 polls to be heard from.

Latest figures show:

Pingle	1616
McCombes	1194
Hendricks	1000

Majority for Pingle over McCombes 422.

While these figures do not insure Mr. Pingle's election on the first count it is admitted by all that he will secure enough second choice ballots on the second count to win the contest.

According to the Act under which this election was fought, Hendricks will now drop out and the second choices on his ballots will be allotted to the other two candidates, and these added to their first choice ballots. By this it will be seen that McCombes must get considerably over 700 second choices on Hendrick's ballots to be in the running. This seems hardly possible as it is well known that a large percentage of the Conservatives voted Pingle for second choice.

The second choice ballots will not be counted until Oct. 9th, so that the final result will not be known till about the 10th.

The result of this election can hardly be called a Liberal victory. It can more properly be called a Charlie Pingle victory, as he is the better known or more popular man in the constituency. Indeed it has been said that if Pingle had been running as a Conservative candidate and Hendricks as the Liberal, Charlie's victory would have been even larger.

Church Anniversary

The fifth anniversary of Gordon Memorial church will be celebrated on Sunday, Oct. 11th and at the annual dinner meeting on Monday evening, Oct. 12th. Rev. Wm. Shearer D.D. will be the anniversary preacher and will also deliver a popular lecture on Monday evening, entitled, "In the Land of Tar Sands and Huskies." Dr. Shearer is too well known in Redcliff and district to make necessary to adding of comments. He is still in the far north and therefore comes qualified to give interesting and accurate information about the hinter lands of our northern province. A double quartette from First Ave. United church, Medicine Hat, under the leadership of Mrs. Burford, will supply the musical part of the program. Rev. Gordon, chairman of the United Presbytery of Medicine Hat, will bring the greetings of Presbytery.

Dog Screen Star Is in Photoplay

Was Educated in the Firing Lines In France

A photoplay featuring a canine star is to be presented at the Cameo theatre on Friday of this week. The picture is "Find Your Man." The dog hero is Rin-Tin-Tin, star of "Where the North Begins."

Most of the action centers around this famous Police Dog whose athletic stunts will amaze you. His education began on the firing line in France where he learned to face shot and shell without flinching, and was continued in California under C. Wells direction of Lee Duncan. He has won many championships in running and jumping.

The story is laid in Timber Center, Gregory Mills and Martin Dains, lumberjacks, persuade Paul Andrews, the sweetheart of Gregory's step-daughter, to float some logs down the river for them. Paul is not aware that he is an accomplice in a plot to steal Government timber. There is a murder for which Paul is arrested, a speedy escape from prison through the help of Paul's dog, Buddy, and then Buddy's remarkable rescue of Paul and his sweetheart from a plunge into the rapids.

Mrs. E. Donais Died Suddenly in Spokane

Contracted Internal „Trouble After Birth of Child

Mrs. Ernie Donais passed away last Sunday at the home of Mr. Donais' parents in Spokane. It is a long time since the citizens of Redcliff received such a shock as they did when this news was passed around last Monday morning.

Deceased had been in Spokane visiting for the past four months. About three weeks ago she gave birth to a baby girl, and the following week she contracted serious internal trouble. Mr. Donais left at once for Spokane but on his arrival there his wife showed much improvement and the ultimate recovery was expected. Last Saturday, however, she grew worse and sank rapidly. Her mother, Mrs. G. McKay, and brother, Ross, left at once for Spokane. Mrs. Donais had passed away before they arrived there.

Deceased, who maiden name was Ina McKay, daughter of Mr. and Mrs. George McKay of this town, grew up from girlhood in Redcliff, and was well known by almost everyone in town. Her quiet, reserved disposition although pleasing to talk to, won for her many true friends who always looked upon her as one of our town's most popular and estimable young ladies.

Deceased was in the sumer time of her life. She was only in her 24th year. Four years ago she was married to Ernie Donais and to them was born two children, little Rossie and the newly born babe, to whom with the bereaved husband the sympathy of the community goes out in this their hour of sore affliction. The funeral took place in Spokane yesterday.

HOLIDAY IN CANADA ON ELECTION DAY

On Afternoon of Voting Day to Allow Electors to Vote

An order in council, making the afternoon of Thursday, October 29th a public holiday throughout Canada, has been passed at Ottawa and signed by the Governor-General.

That is the day of the dominion general election and this holiday was declared in order to give all electors an opportunity to to vote. There should not now be any excuse for electors not being able to get to the

Churches

GORDON MEMORIAL UNITED CHURCH

R. N. Matheson, B.A., Minister

Dear stranger: If your church is not in town Gordon Memorial folks will be glad to welcome you to share in their activities and service.

Organisations of Congregation meet:—

Official Board, Second Tuesday of each month.

Ladies' Aid, Thursday afternoon at 3 o'clock, except last Thursday of the month.

Women's Missionary Society, the last Thursday afternoon of each month at 3 o'clock.

C. G. I. T's, Tuesday 4:00 p.m.

Willing Workers' Mission Band, the First and Third Mondays of each month at 4:15 p.m.

Sunday, October 4th.

Church School, 10 a.m.

Communion Service, Second Sunday in each quarter, at 11:00 a.m.

Ladies' Aid to deliver a supper at 3 o'clock, except last Thursday of the month.

Women's Missionary Society, the last Thursday afternoon of each month at 3 o'clock.

C. G. I. T's, Tuesday 4:00 p.m.

Willing Workers' Mission Band, the First and Third Mondays of each month at 4:15 p.m.

Sunday, October 4th.

Church School, 10 a.m.

Morning Worship.

Women's Missionary Society Service.

Subject: "Women and the Christian Faith."

Usual services will be held.

ST. MARY'S CHURCH

Celebration of Mass 2nd and 4th Sundays of each month at 8.30 a.m., by Rev. Father Fitzpatrick.

A. F. & A. M. District Meeting

The Masonic District meeting will be held in Medicine Hat on Friday afternoon of this week, commencing at two o'clock. Members of Quarry lodge are reminded that the meeting is called for two o'clock, not 2:30 as appeared in the notices.

A gentlemen on a motoring tour stopped to replace a tire in a desolate part of the Highlands. A native chanced along and helped. "I suppose that even here the bare necessities of life have risen tremendously in price," said the tourist. "Aye, ye're right," replied the Scot, "and its no' worth drinkin' when ye get it."

Weekly News Bulletin

Issued by Publicity Commissioner, Government Buildings, Edmonton

Pioneer Rancher Dies

Alberta suffered a loss in the past week in the death of George Lane, prominent rancher and cattleman, and owner of the famous Bar-U Ranch, south of Calgary. Mr. Lane came to Alberta in 1883, and gained world fame for his horse and cattle ranch and large farming enterprises. The Prince of Wales was his guest on the occasion of his first visit to Alberta in 1919, and it was through Mr. Lane that arrangements were made for the Prince to buy his ranch near the B-U.

* * *

Many Teachers in Training

Provincial normal schools will be crowded with teachers in training this term. More than 900 students have been admitted at Camrose and 375 will be in training at the Calgary school. This is an increase over former years.

* * *

New Offer Re Peace River Railway

An informal proposal for the C. P. R. to purchase the E. D. and B. C., the railway into the Peace River country, has been made to President Beatty of the C.P.R., by Premier Greenfield, during Mr. Beatty's recent visit to the city. The offer is being considered by the C. P. R. heads.

* * *

British Journalists Visit Province

The party of ten British journalists who have been touring the west under the auspices of the C. P. R. paid visits to Calgary and Edmonton recently. At Edmonton they were taken to the farm of Lord Rodney near Fort Saskatchewan. The journalists also paid an extended visit to the Alberta University. They were much impressed with what they saw of Western Canada.

* * *

Labor Bureau Places Many Workers

During the nine months from January to September, inclusive, the provincial labor bureau has placed a total of 47,217 workers. During the harvest season this year it has placed 9,638 workers, compared with only 4,702 last year. The unit cost of placements per individual this year has been 62 cents as compared with $1.34 in 1921.

* * *

British M. P.'s Visit Province

Recent prominent visitors to the province from the old land included Rt. Hon. Viscount Gage, Capt. D. Margesson, M.P., and Capt. V. A. Cazalet, M.P., from Britain.

* * *

More Oil at Fort Norman

Further proof that oil in hopeful quantities is contained in comparatively shallow shales on structures in the lower Mackenzie River Valley was brought out from Fort Norman by the Imperial Oil, Ltd., drill crews. The Fort Norman crew reported that in the well drilled this summer, a short distance south of the original Discovery Well, oil estimated in quantity at about 100 barrels per day was struck in a shale at a depth of 1,063 feet.

* * *

Colonizing in Alberta

Sir Newton Moore, with other directors of the British Dominions Land Settlement Association, from London, England, have recently visited the province in the interests of their syndicate which is colonizing a large area in north-eastern Alberta, north of Vermilion. This is the territory to be traversed by the Cutknifee branch of the C. N. R. The directors have obtained a promise from that railway company for a further extension on this branch in the near future.

* * *

Russian Families Settling Here

Twenty-one Russian families of a good type recently arrived in the High River district south of Calgary with a view to purchasing farm lands in the vicinity of the Bar-U ranch.

CAPT. C. S. PINGLE

The Liberal candidate in Medicine Hat by-election who is now leading by 422 and whose election is practically assured.

SCHOOL NEWS

The debating teams led by Margaret Martin and Lucille Bergeron meet in the first semi-final of the local High School Debating League, on Friday at 3 p.m. The subject for debate is "Resolved that motion pictures theatres are a valuable asset to a community." The judges will be Mr. Matheson, pastor of the United Church, and Mr. Cooper, vicar of the Anglican church. Visitors will be welcome.

The Literary Society voted money for the purchase of gold silver and bronze medals for those who took first, second and third place respectively in class by Christmas.

At the end of September Alex Horne led the eight unit students, Edmund Vernon the seven unit students, and Beatrice Bucholz headed those registered for six units.

The latest addition to the air service between London and Paris is a new plane capable of carrying thirty passengers and equipped with a restaurant.

Interesting Sermon After Sport Season

By - Rev. R. N. Matheson—Fitting Close to Sport Season

As a fitting close of the outdoor sport season, Rev. R. N. Matheson preached a sermon last Sunday evening in Gordon Memorial church, taking for his subject "The Game of Life."

As football was the main sport here the past season Mr. Matheson gave an interesting review of the origin of the game and the procedure to draw many lessons from the game which profitably be applied to the christian life. In doing so he referred to the interest shown by Paul in the great athletic meets of the Greeks and Romans. These provided Paul with the rich illustrations for and comparison with the christian life. The training for the course, the course itself, and the reward of the race mentioned by Paul in nearly all his letters to the churches.

Referring to the great essentials in sport, the speaker drew attention to preparation for the game, the training table and the necessity of beginning young playing according to rules for the christian life. The necessity of early training in the home, the church and the Sunday school, the bible as the text book of rules for our guidance and the Christ as the captain of our Salvation. The co-operation of all christian people in the team play of athletic sport, and the attitude of the rank and file has the same effect on the christian life. As the attitude of the spectators has on sport. Both can either help or hinder.

The address was very apropos and convincing.

Funeral of J. Kitchen Was Largely Attended

Service in Gordon Memorial Church Last Saturday

Gordon Memorial United Church was filled to capacity last Sunday afternoon for the funeral service of John E. Kitchen who died at the home of his parents here the previous Thursday.

Promptly at three o'clock the casket, covered with the Union Jack, was carried to the church by officers of the S. O. E., followed by the bereaved family, relatives and friends and a large turnout of G. W. V. A. members.

At the church Rev. R. N. Matheson delivered a splendid and encouraging address from the text "Death is Swallowed up in Victory."

Three solos were being taken from the church to the hearse the band played the Dead March, adding much to the solemnness of the occasion and at the same time giving the cortege a military aspect.

The funeral was one of the largest held in town for some time and it is seldom one sees so many flowers gathered together in one place.

Rev. Matheson performed the burial service at the grave.

Among the flowers was a broken circle from mother, father, wife, sister and brother; and wreaths and sprays from the following: Mr. and Mrs. Edward Atherton and family, Armstrong, B.C.; R.O.S., Fernie, B.C.; S.O.E.; G.W.V.A.; Quarry Lodge A.F. & A.M.; Wilfred and George Oakland; Mr. and Mrs. G. Legg; Mr. and Mrs. Ed. Cooke; Mrs. Bainbridge and Doris Mr. and Mrs. C. Barr; Mr. and Mrs. Geo. Hicks, 3-Day Oakland; Mr. and Mrs. G.N. Pearson; Mr. and Mrs. E. H. Sellborn; Gordon Memorial Church; Mrs. Forbes of Nelson, B.C.; Mrs. F. J. Hicks and family; Ladies Aid of Gordon Memorial Church; Mr. and Mrs. R.J. Hall; Mr. and Mrs. A.G. Osgood; Mr. and Mrs. W. Champ; Ladies Aid of Altar Society; Mrs. N. Weeks; Mr. and Mrs. Land and family; Mr. and Mrs. D. Kerr, Sr.; Mr. and Mrs. E. Millerd; Mr. and Mrs. Oakland; Mrs. Stinson and mother; Mr. and Mrs. Borlase, Medicine Hat; Mrs. R. Wright, Medicine Hat; Mr. and Mrs. Fleming and boys, Kimberley; Mr. and Mrs. C.E. Newnham; Mr. F. Malhott; Mr. and Mrs. Fred Smith; June Millerd; Sis Millerd; J.E. Turrant; Mr. and Mrs. Karlstadt and family; Mr. and Mrs. H. Chapman; Mr. and Mrs. A.E. Smith; Mr. and Mrs. U. Sheasby; Mr. and Mrs. C.T. Hall; Mr. and Mrs. P. Campeau and family; Mrs. Martin; Mr. and Mrs. S. Britt and Mother and Frank; Mr. G. W. Akins and wife and Mrs. H.J. Cox and daughter; Mr. and Mrs. Wells and family; Mr. and Mrs. A.J. Learmonth Mrs. A.A. Duttan; Mr. and Mrs. Bolton and family; Mr. and Mrs. McDermott; Mrs. J. Podesta, Sr.; Mr. and Mrs. Cann and boys; Mrs. Bert Shaw and family; Alberta Govt. Telephone Staff, Medicine Hat; Mrs. J.F. McCleary and family; Mr. and Mrs. A. Collard; Mr. and Mrs. R. Pedersen; Mr. and Mrs. F. Stokes and family; Colonel and Mrs. F. Kellett and daughter; Mr. and Mrs. B. Sheldon.

British Columbia supplied practically all of the 30,000,000 tree seedlings which are being set out this year in Great Britain by the British forestry commission. Two hundred millions of these seedlings have been planted in the British Isles during the past five years.

U. F. Convention For Medicine Hat Was Postponed

BAD ROADS AS RESULT OF WET WEATHER MAKES COUNTRY TRAVEL IMPOSSIBLE—DATE IS SET FOR OCTOBER 9th.

The Medicine Hat Federal Constituency U. F. A. convention scheduled to be held in Medicine Hat today, to choose a candidate for the Federal election, has been postponed until October 9. Delegates from distant parts of the riding started out for Medicine Hat, yesterday and this morning to attend the convention but phoned in that the roads were so bad that they could not get through.

Edmonton Veterans Win Bennett Shield

Defeat Medicine Hat Callies by 2 - 0 Last Saturday

By defeating the Medicine Hat Callies in the final game in the Bennett Shield, played in the capital city last Saturday, the Edmonton Vets will have their name inscribed on the Shield again this year. This is an emblamatic of the soccer football championship of the province. The Vets won out by 2 goals to nil, giving them a 3 to 2 total on the round. This is the third time the Vets have won the Shield.

In the game played in Medicine Hat on the previous Saturday the Callies won out by 2 goals to 1. On this occasion the Vets scored their goal just a few minutes before time was called. It was said at the time that it was threshold carelessness on the part of the Callies the Vets scored at that stage of the game. Now Callie supporters are claiming that just little bit of carelessness and over confidence in the first game lost them their chances for landing the Shield this season. There is a lesson in this for all teams, and that is that the game is not over until the final whistle is blown.

Get Your Name on The Voters' List

Innumerator Will Likely be Appointed Shortly

It is altogether likely that within the next week an innumerator will be appointed for Redcliff to compile the Voters' list which will be used for the dominion general election on October 29th.

All British subjects, male and female, of the full age of 21 years who have resided in Canada for 12 months and in the electoral district for two months prior to the date of the writs, are qualified to be put on the voters' list and vote at the approaching election.

But your name must be on the voters' list. It is the duty of everyone qualified, therefore, to see that his or her name is put on the list. Don't depend on some one else to do this. Do it yourself and make sure.

"The White Desert" At Cameo Monday

Shows Hazards of Drilling Tunnel Through Rockies

Up in the "Top of the World" country, with its wind-torn peaks and desert stretches of snow and ice, was filmed what is reported to be one of the greatest out-door-pictures of the year "The White Desert, which will open at the Cameo theatre on Monday.

Reginald Barker, who has gained Thos. Tonks, Sr., fame with the picture-going public for plays of this type, directed the production for Metro-Goldwyn-Mayer. It is said to surpass his recent picture, "The Great Divide," which was heralded as one of the greatest pictures of its kind.

The story was adapted for the screen from the popular novel by Courtney Ryley Cooper. In order to have none of the vivid portrayal of the book Barker took his entire company into the great snowlands where they faced ever-present death.

The story deals with the hazards of drilling a railroad tunnel through the Rocky Mountains. The undertaking is considered so important that the president of the company, Saul McFarlane, is living with his daughter, Robinette, near the construction camp. John Keith, the head engineer and Barry Houston, his assistant, are both in love with Robinette. She distributes her favor evenly.

Though Canada has but a small per centage of the world's population, she produces 88 per cent. of its asbestos, 85 per cent. of its nickel, 32 per cent. of its pulpwood, 20 per cent. of its lumber, 20 per cent. of its cured fish, 18 per cent. of its oats, 15 per cent. of its potatoes, 11¼ per cent. of its wheat and 11 per cent. of its barley.

The wonder is that a country with such resources has not been more prosperous in recent years.

You have been intending to try "Red Rose." Why not now before you forget.

RED ROSE TEA "is good tea"

The ORANGE PEKOE is extra good. Try it!

Stop! Look! Listen!

Within the short space of less than the life of a generation the automobile has worked a complete revolution in modes of transportation and in the lives of people. But owing to the recklessness of so many drivers of cars it has become a veritable nightmare to locomotive engineers. To a greater extent than anything else it is the cause of nervous breakdowns among trainmen.

This is the age of speed, and thousands of motorists delight in tearing along roads and over railway crossings at top speed although there is no need for haste. They ignore the fact that there is more real pleasure to be derived from leisurely driving, and that a moment's stop at a level railway crossing to allow an approaching train to pass is not lost time. They scorn the risk they themselves run, and every year hundreds pay the full penalty or their folly, while other hundreds have cause to remember in pain and a permanently crippled condition the terrible price they are paying on account of their heedlessness.

But there is another side to the picture, and a locomotive engineer of the Pennsylvania Railroad has written an article, appearing in The Outlook, in which he describes not what the reckless motorist, who tries to "beat" an express train to the crossing, costs the engineer in nerve stability, and the consequent danger to every passenger on the train. This article is so illuminating and timely that it is worthy of repetition. The locomotive engineer in question writes:

"Come and take a ride with me in the cab of my engine. I am going to drive her at the rate of sixty miles an hour, which means that sometimes she will go considerably faster than that. There will be thrills. Perhaps I should tell you in advance of some of the things you will see—and feel.

"There are grade-crossings, you know. The crossings are not dangerous, but the automobile creates a danger at them. I do not recall many trips when I did not have from one to three close calls. At practically every grade crossing where guard-gates come driver goes over after the whistle has been sounded. And where there are guard-gates, they sometimes smash them down and go over just the same. Perhaps you will understand the nature of the thrills better if I give you one or two specific instances.

"On the fifteenth of last January I took my run out at 5.41 a.m. An hour later, I was driving along at reduced speed, probably forty miles an hour. I whistled long and loud for a particularly bad crossing. When within about 150 feet of the crossing I saw lights bobbing around on the planks. That indicated an automobile—headlights. My fireman, as I afterwards learned, was looking directly at the car. It did not occur to him at first that the driver would try to get across. Then he saw him 'give her the gas.' Those bobbing lights, however, had enabled me to divine the driver's intention. I snapped the brake valve to full emergency position.

"We were three hundred feet past the crossing when the train stopped, but the emergency application of the brakes had stayed the engine the one instant that it took for the automobile to get over those rails. The fireman, in a tremulous voice asked me, 'Did he get over?' I answered, 'Yes, he did.' The fireman got up from his seat came over to the gangway at the right side, and, talking as though that driver might be getting every word, said, 'Oh fellow, no one but God saved you.'

"From that instant for the balance of the trip there was an engineer in the cab whose nerves were not fit for his job. Little clicks and knocks were so magnified as to make it seem that the engine was falling to pieces. While crossing a foreign railroad at grade, and having the signal to proceed, one of the foreign railroad's engines started to blow off steam. I started involuntarily from my seat, and it was only with difficulty that I forced myself to remain in the cab.

"Another time before that, after I had sounded the whistle for the crossing, two automobiles shot across, one right after the other, at about forty-five miles an hour. I was thinking how much better judgment those fellows would have displayed if they had stopped and waited only one minute for my train to pass when the fireman shouted to me, 'There's another!' Like a flash, a large coupe went across at about sixty miles an hour. In that coupe was a little girl about five years old on her knees looking out of the rear window. A woman, doubtless her mother, was at the wheel. To me, to look as though the woman was not thinking of her child, but only of not being children by those other two cars—or by that train, either."

This engineer concludes by asking: "Were you ever held up at the point of a gun? I never was, possibly because I never had anything that the other fellow wanted, but I have heard men describe the situation. The hole in the gun-barrel looked as big as a washtub, the bullets the size of cannon-balls. But that feeling, when contrasted with that of the engineer when he is about to strike an automobile, is about as placid as the waters of the Amazon compared with Niagara Falls."

Possibly it is too much to expect a motorist, who risks his own life and the lives of his companions in a car, to give the slightest consideration to the locomotive engineer, or to the hundreds of passengers on the train whose safety depends upon the steady nerves of the engineer. But what grim tragedies would be prevented and suffering avoided if people would only realize that there is nothing "smart" in being a reckless fool.

Plan Labor School

Efforts will be made to form a labor college for British Columbia during the sessions of a school of social science, which has been opened at Summerland, B.C. Men and women from all parts of the Canadian west, from as far east as Winnipeg, are scheduled to attend the meetings.

The older we grow the greater the lack of knowledge we discover in others.

Farmer Anderson: "So your boy's got home from college. Does he take any interest in the farm?" Farmer Gray: "He's beginning to. He's been showing me where we could have a fine golf course an' how easy 'twould be to turn the barn into a garage."

A moneylender had rather a grim experience the other day. He received an unstamped letter and, after paying the fee, found it contained a circular from another moneylender.

Operated With Crude Outfit

Doctor in Alaska Used Jack-Knife and Denatured Alcohol

A tonsil operation was performed recently at Bering River on Controller Bay, 60 miles east of Cordova, Alaska, by Dr. W. W. Council, of Cordova, with a jack-knife and denatured alcohol.

When Dr. Council arrived at Bering River from a hunting trip he was called to handle the case. He had no implements. With the crude outfit he performed the operation with success. No anaesthetic was administered. The alcohol was used to sterilize the knife.

Pain In The Muscles, Stiffness In Joints,

Quickly Subdued By Nerviline

Those who have tested out numerous liniments will agree that where something is needed to dislodge a deep-seated, more or less chronic condition there is nothing to touch it with Nerviline. It's because Nerviline penetrates so deeply, because it has about five times the strength of the ordinary oily preparation, it has come to be known as King of all Pain. For Rheumatic conditions, muscular and joint stiffness, Nerviline works wonders. A trial proves this. Get a 35 cent bottle from your dealer to-day.

Building Great Cathedral

A further stage in the building of Liverpool Cathedral has just been entered upon, in the ceremony of "breaking of ground" for the foundations of the central space and tower, and of the western transepts.

When completed Liverpool Cathedral, which was begun in 1905, will be the second largest in the world. It is the only Anglican Cathedral in these islands to be built from the foundations since the reformation.

CHOLERA INFANTUM

Cholera infantum is one of the fatal ailments of childhood. It is a trouble that comes on suddenly, especially during the summer months and unless prompt action is taken the little one may soon be beyond aid. Baby's Own Tablets are an ideal medicine for warding off this trouble. They regulate the bowels and sweeten the stomach and thus prevent the dreaded summer complaints. They are an absolute safe medicine, being guaranteed to contain neither opiates nor narcotics or other harmful drugs. They cannot possibly do harm—they always do good. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Tariff Experiment Fails

Irish Free State Will Likely Drop Most of Duties

The Dublin correspondent of the London Westminster Gazette says the tariff experiment started by the Irish Free State about two years ago has failed so signally that it is likely most of the duties will be dropped. The idea was, of course, to protect and foster Irish manufactures, but the correspondent writes, foreign goods have not been excluded, while prices naturally have risen and the consumers paid the penalty.

He cites the motor car trade among those especially affected, saying the purchase of cars has diminished considerably, while all goods except tobacco and household furniture, have suffered and several Dublin firms have been unable to pay their way.

Its Quality Sells It.—The fact that so many thousands of intelligent people continue to use Dr. Thomas' Eclectric Oil speaks volumes for its healing efficacy. Ever since it was first introduced it has grown steadily in public favor, owing entirely to its manifold usefulness in relieving and healing sickness. As a specific for cuts, burns, scalds, and various inflammatory pains its record is beyond reproach.

Bear Took Photograph

A camper in one of the national parks in United States, had just set up a tripod to take some pictures of mountain scenery. A bear suddenly appeared and the amateur photographer started running down the mountain side. When the plate was developed later, it was found that the bear in some way had tripped the shutter of the camera and had taken a good picture of the man running down the mountain side.

Stop the Cough.—Coughing is caused by irritation in the respiratory passages and is the effort to dislodge obstructions that come from inflammation of the mucous membrane. Treatment with Dr. Thomas' Eclectric Oil will allay the inflammation and in consequence the cough will usually stop. Try it and you will be satisfied.

Medicine Hat Gets Convention

Medicine Hat secured the 1926 convention of the Western Canada Irrigation Association when the matter was debated at the convention in session in Kelowna, B.C.

Minard's Liniment for Dandruff

W. N. U. 1591

A Freak Lightning Bolt

Bolt Doing Damage in Truro, N.S., Came From Cloudless Sky

From a cloudless sky a bolt of lightning, accompanied by a deafening thunder, descended upon Walker Street in Truro, N.S., shattered a tree, entered a house via the telephone wires, burned a telephone box, and left by an open door, in which a young child was standing.

The child was unhurt, but a pedestrian on Walker Street, was stunned and several others were shocked, while telegraph instruments a quarter of a mile away were put temporarily out of commission.

There was but one bolt of lightning and one clap of thunder and through it all the sun shone brilliantly and not a cloud was to be seen. A similar occurrence was recorded there three years ago.

Miller's Worm Powders were devised to promptly relieve children who suffer from the ravages of worms. It is a simple preparation to destroy stomachic and intestinal worms without shock or injury to the most sensitive system. They act thoroughly and painlessly, and though in some cases they may cause vomiting, that is an indication of their powerful action and not of any nauseating property.

Eagles Travel By Aeroplanes

Two Birds Develop Ravenous Appetite On Unaccustomed Flight

A pair of golden eagles, presented to the Zoological Garden at Schoenbrohn by King Ferdinand of Rumania were shipped to their destination in an aeroplane. This unique mode of transporting the two sovereigns of the air was employed by orders of the Royal donator, who wished his gift to arrive as a surprise. The only effect this unaccustomed flight seemed to have had on the two birds was to give them a ravenous appetite.

Minard's Liniment for Burns

Gas for street lighting was first used in Baltimore.

Largest Office Building

New York Structure Will Have Seven Floors Below and Thirty Above Street

Negotiations have been completed for the erection, near Grand Central Station, of what will be the world's largest office building. The structure, rising 30 stories from the street level, will cover an entire city block and will cost $19,000,000.

Seven complete stories, a new record in "underground skyscraper" construction, will be built below street level in a gigantic cavern cut in the granite foundation of Manhattan Island. The excavation work planned is considered one of the world's notable engineering feats.

The structure will contain 21,000,000 cubic feet, with 1,350,000 square feet of rentable space. The building will run from Forty-third to Forty-fourth Streets, between Lexington Avenue and Depew Place.

Concentrate In Ourselves

Plan to Commemorate the Sixtieth Anniversary of the Dominion Next Year

Canada ought to concentrate somewhat on herself, and give a little more emphasis to her own individuality. As a country we deprive ourselves of a certain nourishment without which patriotism can never be at its best. We have a great country and a fine people and we should, now and then, by means of a concerted national celebration, light fires on our hills, signal to each other and indicate that unison of sentiment which really exists. The sixtieth anniversary of the Dominion on July 1, 1927 gives Canadians their opportunity.—Toronto Star.

Canada May Benefit

Englishman Left Fortune For Charity In United Kingdom

Nearly 230,000 pounds sterling for charity have been bequeathed by Col. J. Barlow, a magnificent supporter, in his lifetime, of Ilsley.

Col. Barlow made many visits to Canada in connection with rifle shooting. Canada may benefit under his will, as he left the residuary estate "to be applied, within 21 years of his decease, for such charitable purposes within the United Kingdom, Ireland, India, or any British state, colony, or dependency, as the trustees, in their wisdom, think fit."

The will adds that Col. Barlow desires that no money left by him shall be used for sectarian or political party purposes.

Genuine BAYER ASPIRIN

Say "Bayer"—Insist!

Unless you see the "Bayer Cross" on tablets you are not getting the genuine Bayer product proved safe by millions and prescribed by physicians for 25 years.

Safe — Accept only a Bayer package

which contains proven directions

Handy "Bayer" boxes of 12 tablets
Also bottles of 24 and 100—Druggists

Aspirin is the trade mark (registered in Canada) of Bayer Manufacture of Monoaceticacidester of Salicylicacid.

New Homestead Record

Setting the highest monthly record in nearly three years, 109 homesteads and 12 soldier grants—a total of 121 quarter sections—were filed upon at the Dominion land office at Edmonton in the month of July.

The more man has, the more he wants—with the possible exception of the father of twins.

Cuticura Should Be In Every Home

Daily use of Cuticura Soap keeps the pores active and the skin clear and healthy, while the Ointment heals pimples and other irritations. Cuticura Talcum is a delicately medicated antiseptic powder of pleasing fragrance.

Sample Each Free by Mail. Address: Canadian Depot: Lymans, Ltd., Montreal. Cuticura Soap 25c. Ointment 25 and 50c. Talcum 25c.
Cuticura Shaving Stick 25c.

Another Century Will See Pacific Coast Importing All Of Its Lumber From Europe

One hundred years from now the people of the Pacific coast regions of North America will be importing lumber from Europe. So stated a recent forestry expert from Norway after an extensive journey through the timbered country of Oregon, Washington and British Columbia.

In view of the thousands of miles of stately standing timber on the Pacific coast today from California to Alaska, the foreign expert's words seem too ridiculous to even merit consideration. For here, upon a rugged coast-line, and reaching far into the interior, is such an abundance of tree growth, close-standing and mighty, as to seem inexhaustible. No other land of earth has been so richly covered by nature with such species as the fir, hemlock, spruce and cedar, as the Pacific coast.

Yet, despite this far-reaching, still-standing army of timber, lumenesely tall and thick of butt, so vast and ever-increasing is the destruction caused by the logging industry that already there are a few far-sighted men nearly in agreement with the prophecy of the foreign authority. "Abundance, luxury, decline, desolation!" Those words of Daniel Webster rise up to sound a warning to the too optimistic people of a new land.

A tree which took a thousand years to grow can be felled and cut up into saw-log lengths in half a day of the logging industry, when horses and oxen were used to draw out the felled timber, no harm was done to the surrounding stand. Today, "high-lead" logging is coming more and more into use. By this system the enormous logs are lifted, by donkey-engine power, and steel cables one to two inches thick, and carried through the air. And the dangling, moving logs, many tons in weight, smash down all growth before them. Seedling and sapling are crushed to earth. Trees fifty years in the growing are broken like matches. When a modern lumbering outfit finish work, the ground is a desert. Trees that would produce lumber in another half-century are turned into waiting fodder for the fire demon. Fortunes in pole, tie and pulp timber have been wasted. Not a seed tree even is left.

With these things in mind, the prophecy that "the Pacific coast areas will be importing lumber from Europe in a hundred years," seems less of a far-fetched statement.

How English Dry Wet Hay"

Farmers Enthusiastic Over Process That Works Successfully

In England, where rain falls so frequently that it is no easy matter for the farmer to "make hay while the sun shines," they have hit upon a plan that makes it possible to cut grass and stack it in the midst of rainstorm without injury to the hay. Of course the wet grass cannot be put directly into the barn, which is what most American farmers do with hay properly sun-dried. The British farmer puts up a frame made of stout poles connected by wire, and from the base of the frame he runs a pipe out to the drying machine. The newly mown hay is stacked up about the frame in a circular shape. He then thatches it tightly an' starts his machine, which drives hot air through the pipe to the bottom of the stack. The heated air rises through the grass, and in a day or eight hours no less than twelve tons of hay can be thoroughly dried. Enthusiasts over this contrivance say that hay thus dried retains more of its nutritive value than sun-dried hay. The drying machine can be driven by any gasoline engine; that of a farm tractor will serve. The engine operates a fan that drives into the pipe air that has been heated by passing over cylinders that are kept hot by kerosene burners.

Cuba Has Many Newspapers

There are 511 newspapers in Cuba, or 131 to each million inhabitants, data issued by the national statistics bureau revealed. Havana province, in which the capital is situated, leads with 289. Nowe publications in the other fire provinces are as follows: Pinar del Rio, 28; Matanzas, 52; Santa Clara, 71; Camaguey, 29; and Oriente, 51.

Calgary's Population

Calgary's population in 1925, estimated by the Henderson's directory, following a careful survey of the city, has been placed at 77,590, according to the 1925 issue which has just been published. Last year this same authority estimated the population at 76,332, showing an increase of approximately 1,500.

Dehydration Best Method

Extensive Experiments Have Proved Process is a Success

Dehydration is the drying of fruits and vegetables by artificially produced heat under carefully controlled conditions of temperature, humidity and air flow That the process is a success has been proven by extensive experiments carried on at Ottawa, superior products being produced and the freshness and flavor better maintained than by any other method. In an address before the Pomological Society of Quebec, Miss E. W. Hamilton, canning specialist of the Dominion department of agriculture, gave the following as the advantages claimed for dehydration: That fruits where cooked more nearly resemble the natural in flavor and color than when treated by evaporation; that the fruits are protected from dust and bacteria; that the market is saved from a superabundance of ripe fruit; that the product requires less space, is of much less weight than if fresh, can be shipped in far cheaper containers than canned or preserved fruits, and that dehydration makes possible the combination of drying, packing and all the steps in the process under the one roof. Miss Hamilton thought circumstances proved that dehydration would eventually take its rightful place as a valuable by-product branch of the fruit industry, if not a worthwhile industry of itself.

Interesting To Sheep Raisers

Revision of Ram Premium of Dominion Livestock Branch Ready for Distribution

Farmers who keep sheep will be interested in the ram premium policy of the Dominion livestock branch. This policy has been recently revised and a pamphlet containing the rules and regulations up-to-date may be obtained from the sheep division, livestock branch, department of agriculture, Ottawa. According to the new regulations ten or more owners in a district, each keeping ten or more breeding ewes, and none of whom has previously kept a pure-bred ram, must agree to purchase pure-bred rams of the same breed. Two farmers each of whom keeps less than ten ewes, may combine their flocks as a unit under the plan. Certain regulations, detailed in pamphlet, regarding dipping of flocks, docking of lambs, must be complied with. When this is done two annual payments of five dollars each will be paid by the livestock branch for each ram used, which will go a long way in making up the difference between the cost of a scrub ram and that of a good pure-bred ram. The increased value in wool and lambs easily makes up the balance.

To Have Coast Office

Alberta Wheat Pool Plans to Export Most of Its Grain From Vancouver

Offices are to be maintained in Vancouver by the Alberta wheat pool. Since the pool contemplates exporting most of its grain through Vancouver there will be a tremendous amount of office routine to be carried out in connection with the pool's dealings with the terminal elevators, the railway companies and especially the shipping companies which convey the grain to the markets of the world.

It is understood that premises have already been selected, and the personnel is on the way to take charge. The pool charters its own cargo space and will have to maintain a fairly large staff to handle the various details of its activities in this port.

Buffalo Remain in New Reserve

Flat denial that any buffalo transported from Wainwright to the wood bison reserve at La Biche, on the Slave River, are breaking away to the south back to their old home at Wainwright, or that they are ever likely to, was made by D. M. Christie, of the North West Territories and Yukon branch of the department of the interior, who supervised the whole movement of the 1,384 plains animals to northern regions recently.

Buys Old Bible

One of the first Bibles that came off the press of Johann Gutenberg, inventor of movable type, has been sold in Vienna, Austria, to an English purchaser for what is reported to have been a large sum. The Bible is the so-called 42-line Bible of the Melk Cloister in Lower Austria. The name of the buyer has not been disclosed.

"Can you support my daughter in the style to which she is accustomed?"

"No, but I can accustom her to the style in which I can support her."

Advises Canada To Get Boy Immigrants

200,000 Desirable Settlers Leave British Schools Yearly Says J. Obed Smith

In a recent interview, Colonel J. Obed Smith, former Canadian government official in London, stressed the importance of British boy immigration. This, Col. Smith said, had been realized by Australia but not appreciated in Canada. "In fact," said he, "Canada has lagged behind."

"Not less than 200,000 boys leave British schools every year, crowding the London market. These should form a new immigration field each year from which Canada could draw very many desirable settlers. Australia has proved the value of the young British generation to the full, but Canada has not done so. People inquire in public if Canada really wants immigrants, especially when the Empire Settlement Act of the Imperial Parliament provides financial assistance to an extent that has hardly a limit within the possibilities of use. No one can complain that the British people are not willing to assist their own to settle in Canada."

Col. Smith emphasized the fact that, if the scheme was to prove successful, the boys would have to be placed with good farmers, receive fair wages and the government would have to see that a portion of such wage was placed in the youngsters savings bank, so that by the time the boy reached mature years he should have sufficient money to make a start on a farm of his own.

Big Game Being Massacred

Police Force Unable to Prevent Carnage in Transvaal

Sportsmen returning from the northern part of the Transvaal speak of the reckless slaughter of big game by hunters who seek supplies of biltong (sun dried meat). This wanton slaughter followed a recent proclamation allowing the shooting of the Wildebeste or Gnu, a South African antelope having a buffalo-like head, an ass-like mane and horse-like tail. Apparently all sorts of big game are being turned into biltong and the wagons return from the hunting grounds with full loads of game. The open country is described as unsafe. Guns are being fired all day long, and there are casualties in consequence. Meanwhile game is being absolutely massacred. Many animals are merely wounded and are left to die in agony. The police force is not large enough to prevent the carnage.

Business is Improving

Employment at the beginning of July showed a further increase in Canada of 2.3 per cent. This gain caused the index number to stand at 96.8 as compared with 94.5 in June last and with 95.9 on July 1st, 1924. With the exception of logging, in which there was a seasonal decline, and trade, which showed no general change, all industries registered increased activity on the whole, according to the Dominion bureau of statistics.

Unveil Monument

A monument to the four hundred British sailors and soldiers drowned when the British transport Transylvania was torpedoed and sunk by the Germans in the Mediterranean Sea in May, 1917, was unveiled Aug. 17 at Sportorno.

It is the want of health that makes wealth—for the physician.

English Hounds for Ontario Hunting Grounds

This consignment of twenty-one Foxhounds from the famous Meadip Hunt Pack, at Priddy, Somerset, was brought to Canada in July by the Dominion Express Company for the Toronto Hunt Club. Commodious quarters were especially erected on the "Montrose" for the long ocean voyage and Huntsman Morris, from the Toronto Hunt Club, who brought the animals across, stated that they suffered no ill-effects from the trip. This is the third batch of foxhounds brought to this country by the Dominion Express within recent weeks.

Livestock Trade In Six Months

Shows Decrease of Thousand Head in Canadian Sales

The Dominion livestock branch market review shows that during the first six months of 1925 compared with the same period of 1924 there was a decrease in all Canada of a thousand head in the sales of cattle. Toronto showed an increase but the other markets had a decrease. Hogs increased by 95,000 compared with last year, Toronto alone showing a decrease. Increased offerings were particularly noticeable in the west. Sheep supplies dwindled, the markets generally showing a falling off.

A feature of the export trade was the increased shipments of cattle to Britain, they being the largest in June for any month since the embargo was removed in 1923. Exports of calves, hogs and sheep also showed an increase compared with 1924. The trade in live hogs between Western Canada and the Pacific coast continues good. Great Britain has more than doubled her purchases of beef but the United States has fallen away 50 per cent. Sales of bacon increased during the six months of 1925 by 10,000,000 lb. compared with 1924. Exports of pork have doubled and mutton and lamb show good gains, although the trade is still rather small.

What Is A Good Veal Calf?

Points To Be Considered Before Offered For Market

This question being put to the author of "Beef Raising in Canada" published by the department of agriculture at Ottawa, the answer was, "It must be between the ages of four and eight weeks and be well fattened." A good veal calf weighs from 100 to 200 lbs., a prime specimen ranging from 120 to 160 lbs. A well fattened veal, calf dresses from 65 to 70 per cent. with the skin on. Its head should be comparatively small as compared with the body and be sleek in appearance. The neck or "scrag" should be thick, chest full, ribs well covered, loin wide, flanks full, points of rump plump and meaty, thighs plump and scrotum or udder full. A good veal calf should have a generally firm touch all along the back and a sleek mellow skin that will lift easily from the body. A calf with such points is ready for the market, will command a good price, and is sure to give a good carcase of veal.

Owe Success To Rain

Cotton Industry in English Cities Depends On Moisture

All of which speaks of weather making a place rich and populous, one's first thought is naturally of health and pleasure resorts where blue skies and sunshine are usual and rain scarce. But there are many places that owe their success to bad weather.

Manchester and its neighboring cities have a damp atmosphere that is particularly adapted to the spinning of cotton, and these places would be in a fix if the rainfall were suddenly halved. For similar climatic reasons Belfast has become the world's centre of the linen trade. Belfast has 221 rainy days out of the 365, and the suits both the growth of flax and its manufacture.

Women are naturally foolish because they were made to match the men.

Europe now has 13 sovereigns and 19 presidents.

Pioneers Continue To Come From Many Nations To Take Up Homesteads On Prairies

Lime In Feed

Feed and Drink Must Supply the Necessary Lime Compounds

One of the most important of the mineral constituents which enter into the tissue of the animal body is lime (calcium), says Dr. Shutt, Dominion chemist. Small traces of calcium compounds occur in muscle and the blood, bones and teeth are essentially phosphate and carbonate of lime. Cows need it in their pregnant state in order to supply their own needs and to build a strong skeletal structure in the developing calf. Special attention should be given to the phosphate of lime supply for swine because of their lack of access to their natural growth and the general nature of their feed which too frequently is poor in lime compounds. The production of eggs and milk, Dr. Shutt points out, make large demands on the phosphate of lime content of the ration. Feed and drink must supply the necessary lime compounds. Hard water, no doubt, is one of the principal sources. Among the leguminous hay-pastures are particularly rich in lime, alfalfa heading the list; the feeding of which or other leguminous hay fodders practically obviates the necessity of supplementing the ration with special mineral-containing feeds. Meat and bone meal, bone meal, tankage and certain other packing-house by-products are rich in desirable mineral constituents. In summer the probability is the animals while foraging, especially in clover, will provide themselves with a sufficiency of calcium, but in winter the feeds containing a large proportion of the milling by-products of wheat, oats, corn, etc., may require supplementing with calcium rich feeds, unless good clover or alfalfa hay can be liberally fed.

Canada May Have New Ocean Port

Glacier Bay Likely to Provide Outlet For Yukon Area

The Vancouver Sun publishes the following from Stewart, B.C.:

"Canada may have a new ocean port, giving direct access to the sea from Yukon Territory and obviating the present necessity of crossing United States territory from Skagway, according to statements made by J. P. Forde, Dominion Government engineer, who passed through on his way to the head of Glacier Bay, an inlet west of Juneau.

"When the boundary between Alaska and Canada was delimited, it ran east and west several miles north of the head of open water in Glacier Bay, but leaving a strip of solid ice or glacier connected with the waters of the bay. Changing climate, unusually warm weather or some unnatural upheaval of the ice bed has caused the ice to disintegrate, Mr. Forde declares, with the result that the open waters of Glacier Bay now extend past the boundary line into Canadian territory.

"An outlet is feasible, provided a route can be found to connect with the Yukon River or other streams of the interior."

Saskatchewan Butter Production

Increases 27.9 Per Cent, Or 638,591 Pounds In July

Saskatchewan's production of creamery butter in July jumped another 27.9 per cent, or 638,591 pounds, when the production for the month was 2,925,291 pounds, against 2,286,-700 pounds in the corresponding month a year ago.

Production for the first seven months of this year totals 9,206,322 pounds, as compared with 7,395,579 pounds in the same period last year, or an increase of 1,909,743 pounds, 25.8 per cent. The central portion of the province is still making the proportionately greater increase in production month by month.

Hebrideans Doing Well

That the young Hebrideans in the Red Deer district are doing well is the statement of Rev. Father John McMillan, one of the active workers in the immigration scheme which has brought several hundred settlers from the north of Scotland. They have been able to enter the labor market and make good wages, which are in turn invested in farm operations.

A Fifty-Fifty Basis

In Sweden and in Denmark, when both the father and mother are working, they must split even on payments of bills. And if the father loses his job and the mother continues working, she must support father until he gets another job. Each has a right to know what the other is making or has in the bank.

Pioneering days are over, adequate transportation, good roads, nearby markets, etc., having done away with the necessity of "hewing a home in the wilderness" and blazing a trail for others to follow, says the modern sage, but an incident that happened recently in the Edmonton, Alberta, land office not only disproves this fallacy but clearly illustrates that pioneering is still an attraction for many. The other day there walked into the Edmonton land office a man about 58 years of age, strong, upstanding and bronzed by an out-of-doors life, who made known his desire to tackle farming once again and took out papers on a second homestead in the Last Great West—the Peace River country. Applications on homesteads in the west are being accepted daily by the Federal Government, and the statement that a man sled on a second homestead would not appear unusual were it not for the fact that only those who filed on the land prior to June 2, 1889, are entitled to second entry.

When this farming pioneer came to Canada in 1884, a lad of 18 years of age, from a little farm in Cornwall, England, and settled on a homestead fifty miles from the nearest settlement—Portage la Prairie, Manitoba—and before the Canadian Pacific Railway had commenced operations in the west, he had had to put up with all the hardships incidental to pioneer life. With the characteristic perseverance of the early settler, he cleared, broke and cultivated his land. The coming of the railway and settlement of the adjoining lands brought many improvements, both in farming and living conditions. His labors became less arduous and he united his family in comfortable surroundings.

A few years ago he sold his Manitoba farm, intending to retire to a well-earned rest. However, when his sons took up homesteads in the Peace River country, he was unable to repress his pioneering spirit, so he once again filed on free land, not only to be near his sons, but also to help develop and settle the country which first gave him a start towards success.

This is the somewhat brief but significant story of one Englishman who came to Canada looking for a home and independence. His record of achievement in the west has been emulated by numerous fellow-countrymen, as well as by natives of many other countries. At the last census of homestead entries, it was found that, in addition to native-born Canadians, over 36 different nationals had taken out homestead papers in the prairie provinces. Some of these pioneers came from such far lands as Iceland, China, Japan, Persia, Greece, India, Palestine and Mexico. There seems to be no limit from which Western Canada draws her settlers.

Within recent years the areas suitable for homesteads have become more and more restricted. At January 1, 1925, the Federal Government estimated that of the land surveyed in Manitoba, Saskatchewan and Alberta, nearly 55,000,000 acres were devoted to homesteads. The scarcity of free lands in close proximity to the railways, however, does not seem to be any drawback to the homesteader—3,754 entries were made in 1923—and the enhanced attractions of the fertile open prairies insure, for some time to come, a steady stream of that most valued class of settler—the pioneer.

Procuring Caribou For Museum

New York Man Goes To B.C. For Special Specimens

Proceeding to the Cassiar country of British Columbia for the purpose of getting special specimens of the Osborne caribou for the American Museum of Natural History, New York, Mr. and Mrs. James Lippitt Clark have sailed from Vancouver.

They intend going to Wrangell and from there to Telegraph Creek, head of navigation to the Stikine River, where they will outfit for two months in the Cassiar. Mr. Clark, who is assistant director of the American Museum, has made several trips procuring specimen for that institution.

Sounds That Travel Far

An experimenter in a balloon reports hearing a man's shout at 1,600 feet; the croaking of frogs in a marsh at 2,000 feet; the roll of drums and music of an orchestra at 4,500 feet; church bells tolling at 5,000 feet; a rifle report at 5,900 feet; the noise of a moving train at 8,200 feet; and the whistle of a locomotive at 10,000 feet.

"T.B." To Be Very Rare

Twenty-five years from now tuberculosis will be as uncommon as leprosy is today, says Dr. C. A. Saleeby, of the London Medical Institute.

THURSDAY, OCT. 1, 1925.

GET AFTER THEM

AT the present time there appears to be good prospects for the establishment of sugar factories, salt factories and plants to make paper from straw, in different parts of Alberta. In the locating of all these plants one item of tremendous importance to insure their success, is fuel. Redcliff has an unlimited supply of the cheapest and most conveniently handled of all fuels—natural gas. This being the case there should be some effort made to get those at the head of these different enterprises, interested in Redcliff.

There are many things to be taken into consideration in the establishing of industries, and since Redcliff started out on its career with the intention of becoming an industrial centre, it would be well if we had some organization or some individuals who would compile facts showing the advantages of this town for the location of such enterprises, referred to above.

Different industries have different requirements. What we have in Redcliff might appeal to one class of industry and not to another. The main thing is to get busy and find out the requirements of those now contemplating establishing plants and see how what we have to offer stacks up with their requirements.

Trying to get industries or new business is like shooting at ducks. A hunter might shoot off a whole box of shells and only et one duck. That makes the duck all the more valuable. We might go out after a dozen industries and only land one. But we have to go after both the ducks and the industries if we want to get them.

THE DOMINION ELECTION

WITH the provincial by-election in Medicine Hat now over, it may be expected that things will warm up considerably in this district in the federal field.

In the federal election Redcliff provincial constituency is a part of Medicine Hat constituency, and the boundaries of the latter have been changed by the re-distribution in this province.

The new federal constituency is bounded on the north by the Red Deer river, east by the Saskatchewan boundary, south by by the international boundary and extends west to the other side of Brooks.

So far only the Liberal candidate, Dr. Gershaw, of Medicine Hat, has been selected. The U. F. A. convention is being held today and the Conservative convention tomorrow. There is no doubt that at both these conventions candidates will be selected, so that the contest in this constituency will be a three-cornered one.

This being the case all present shades of political thought will be represented and the voting public should not have much difficulty in deciding on a candidate for whom to cast their vote.

The main thing just now is for the electors to carefully study the platforms of the different candidates and the parties which they represent so as to be in a position to vote intelligently when the time comes to mark the ballot.

Each of the candidates will address meetings here before election day. Turn out and hear what they have to say.

NOT VERY ENCOURAGING

THE Labor party leaders in the Medicine Hat by-election tried to make political capital out of the fact that the Liberal party, when in power in this province, spent from nine to twenty-five thousand dollars a year with the Medicine Hat News for job printing and advertising. These labor leaders appear to glory in the fact that under the present administration none of this work now being done by typographical union printers in Medicine Hat but instead is being done by Edmonton printers to the tune of approximately fifty thousand dollars a year.

This looks to the Review like a very short sighted and narrow gaged piece of election trickery on the part of the labor leaders of our neighboring city. It makes it look as though some branch of organized labor in that city was being double crossed, and that branch is the typographical union, as the Hat members of that organization got a large share of the money spent in the News office, during the years in question.

One would have thought that the labor party in Medicine Hat would have been tickled to death to know that there was in its city a printing plant equipped turning out such a large amount of work and giving employment to an increased number of printers.

If it was wrong for the Liberal government to spend $25,000 a year with the Medicine Hat News, it was twice as wrong for the government which labor is supporting to spend twice as much with the Western News of Edmonton during 1924. But we do not think that either governments did anything out of the ordinary in this connection. We believe that for every dollar spent by both governments, whether it was in Medicine Hat or Edmonton, they got one dollar's worth of stationery and service in return.

No one can blame the present government or any government for having its printing done where ever it wants to. The only criticism that can be offered is that this enormous amount of printing might be more evenly divided among all the printing offices of the province.

But even this suggestion might be answered by the government by referring to the expediency and economy of such a system.

It must be very encouraging to the citizens of Medicine Hat to know that the labor party of that city would appear to prefer having government printing done in Edmonton than in their own city. The vote in Medicine Hat last Tuesday showed that a large majority of the citizens of that city did not agree with this attitude of the labor organization and its candidate.

Ten Thousand Alberta Farmers with One Million Acres of Wheat

Are Now Ready to Join

The Alberta Wheat Pool

A Comission of $1.50 per contract will be paid on all bona fide Contracts sent to Head Office

Between Sept. 20th and Dec. 31st, 1925

The Campaign is open to the public and a commission will be paid to all canvassers except members of the Board of Directors and Employees of the Pool.

Delegates and Local Secretaries are eligible to canvass and to receive commission.

CONDITIONS OF CAMPAIGN

(1) All Contracts sent in must be complete as to signature of the grower, his Post Office address, land location, etc. If the Grower's name is not clearly written, print it.

(2) A Canvasser's Report properly filled in must accompany each parcel of Contracts. This will show to whom the Commission should be paid.

(3) Where the membership fee of $3.00 is paid in cash by the signer, the Canvasser may remit $1.50 to Head Office and retain the balance as his Commission.

(4) Where the grower signs the note for $3.00, the Canvasser should see that the signature is properly witnessed. A commission of $1.50 per contract will be mailed to the Canvasser's address as shown on the Canvasser's report accompanying the Contract.

(5) Contract forms, Canvasser's Report forms, and self addressed envelopes, are being sent to all Wheat Pool Delegates, Wheat Pool Local Secretaries, U. F. A. Secretaries, and Secretaries of Municipal Districts, or you can write to Head Office for supplies.

BOARD OF DIRECTORS

ALBERTA CO-OPERATIVE WHEAT PRODUCERS, LTD
CALGARY

ALPINE CLUB OF CANADA ENJOYS RECORD MEET

(Upper) Abbotte Pass Hut and Glacier Peak. (Lower) Director Wheeler reading report at the annual meeting. (Insert) Mr. Wheeler, right, congratulating Capt. MacCarthy, who just returned from capturing Mount Logan.

"The camp this year was one of the best climbing camps we ever had," said T. B. Moffatt, regarding the outing of the Alpine Club of Canada, at Lake O'Hara, this summer. The weather was ideal and there was work for all classes to do, hikings to Lakes McArthur and Oesa, and to the Opabin Pass. Then shorter climbs were available for the graduates, such as Shafer and Odaray. The more seasoned climbers had Huber, Victoria, Lefroy and Hunabee.

The high mountains were in a better condition this year than they have ever been before owing to the scarcity of ice. From 50 to 60 members were out every day climbing, the two days' trip over the passes being very popular. Through the courtesy of the Canadian Pacific Railway, which placed its hut, situated at the top of the Abbot Pass, at the disposal of the members, the work of climbing was greatly facilitated.

The annual business meeting of the Club was held at Lake O'Hara Camp on August 8th. This was an auspicious occasion, for Captain MacCarthy, leader of the Mount Logan expedition and Henry S. Hall, one of the party, were present. The business of the Club was transacted in the morning at ten o'clock, under the large gly on the shores of Lake O'Hara. No setting for the occasion—that of welcoming Capt. MacCarthy and his party—could have been more appropriate than amid the superb peaks that surround O'Hara. Flags of various nations were strung between the trees of this primeval forest in which the camp was pitched, this being the Club's own property, which Mr. Wheeler, its director, secured as far back as 1907. The scene was a festive one, the whole atmosphere, despite the serenity of these majestic peaks and lake, was one of joviality and every one was in particularly good spirits.

Captain MacCarthy was elected a honorary member of the Club, not wholly on account of the Mount Logan ascent, but on other grounds as well, for he was recognized long before this as an outstanding mountaineer. Votes of thanks were extended to the Canadian Pacific Railway and various departments for the Swiss Guides and the mountain hut at Abbot Pass.

THE REDCLIFF REVIEW

An Interesting Experiment

Experimental Farm at Agassiz, B.C., Is Raising Queen Bees

An exceptionally interesting experiment is being conducted at the Agassiz, B.C., Dominion experimental farm. A start was made last year in the rearing of queen bees for domestic use. The colony selected for the purpose was the highest producer on the farm, it having yielded 210½ lb. of honey in one season. In his report for 1924 the superintendent, Mr. W. H. Hicks, describing the method adopted, says queen cells were obtained by raising all the brood and young bees possible from the brood chamber and leaving the queen in the lower chamber, which was filled with empty combs. A wire screen was placed between the parent hive and the super containing the brood, with an entrance made at the rear. Two days later a number of cells were found and on the ninth day the queen cells were grafted to frames. These frames were placed in de-queened colonies. From the eight colonies treated in this manner six queens emerged, two failed to mate, while the remaining four were large and mated well with pure drones, as the young bees produced were golden and uniform.

Sale Should Be Stopped

Revolvers, Whether Cheap or Expensive, Are Deadly Weapons

"Six factories in one town in Spain are devoted to the manufacture of cheap revolvers, and 500,000 of these murderous weapons are exported to the United States each year on the orders of conscienceless dealers who dispose of them to any person who may seek to buy. It has been proven that many of the murders committed in Chicago are due to the use of the Spanish-made revolvers. The tariff commission will now recommend to the president that the importation of cheap revolvers be stopped."—Bay City, Mich., Times-Tribune.

"Penny wise, pound foolish," says the Ottawa Journal. "If there is any good argument for stopping the importation of cheap revolvers, the same argument is good for stopping the importation of all revolvers. If revolvers are an evil thing, are they any less evil when they are of the most efficient and deadly kind, as expensive revolvers are?

"And if good argument exists against importation of revolvers because they are evil, does not the same argument apply against home manufacture?

"Why permit revolvers, at all? Even our police are not supposed to shoot first."

A Higher Critic

Colored Preacher Objected to Having Sermon Spoiled

The "monkey trial," at Dayton, Tennessee, brings to mind a sermon preached by a colored gentleman on the subject of origins. "God made de black man out ob some dark mud what he took 'n moulded into de form ob man, and dey set 'im up agin de palin's fer to dry. Den He took some white mud 'n moulded de white man and set him up agin de palin's to dry. Den He made woman." "But who made dem palin's?" asked a critical listener. "You sit down, brudder," thundered the preacher. "Such questions as you all am askin' would jes' natchully ruin any system of theology."—London Morning Post.

Clever Work Of Sicilians

One of the most unique exhibits ever displayed in Canada, and one which attracted attention from one end of the Dominion to the other, is the display of the miniature Holy Land which has been shown in Edmonton. This miniature of the Holy Land was manufactured by Gauci Brothers, two Sicilians, who have been working for more than eleven years on the exhibit. The exhibit includes sixty million pieces and has 200 moving figures. Biblical scenes in amazing details are reproduced in miniature. The exhibit is to be shown throughout Canada and the United States.

Decides When Eggs Are Fresh

When is an egg fresh? After three days' deliberation, which shows how serious the question is, a French court has decided that an egg is fresh when it is not more than two weeks' old in summer or more than three weeks' old in winter. Hereafter eggs in France will bear in red ink the date when they were laid.

Chinese history dates back to 2637 B.C., when the people were made up into clans or tribes and were ruled by a sovereign.

Printing and gunpowder were invented in China, and the first newspaper in the world was printed in Pekin.

Estates Of British Nobility Disappearing

Lands of Late Lord Leverhulme Now in Market

Day by day the vast landed estates of the British nobility keep coming into the market for sale under the auctioneer's hammer.

Latest of those announced for forthcoming sales is the great sporting estate of the late Lord Leverhulme, comprising more than 360,000 acres. It is to be broken up and sold in portions by auction unless a buyer in the meantime is found for the whole estate.

It includes, besides large Scottish mainland holdings, Harris Island, which is eighteen miles wide by twenty-one long, and several smaller ones. In the properties are included one 42,000-acre deer hunting and sporting tract, and another of 22,000 acres, with excellent facilities for salmon fishing, so the auctioneers announce.

Another well-known Scottish sporting property that has just come into the market is Colgnafearn, an estate of about 33,000 acres famous for its all-round shooting.

"The deer forest and moor of Colgnafearn are capable of yielding 100 stags and 2,000 brace of grouse respectively," says the auctioneer's card. "The salmon fishing is late, and there is capital trout fishing."

Oldest Pen In Existence

Made of Bone and Very Simple in Construction

Of course we know that thousands of years ago the ancients used to write on stone tablets. And if we were at all interested in this sort of thing, we know that they had an instrument called a stylus instead of a pen. The stylus was made of iron, bone or some hard substance that could be given a good sharp point. The tablets on which they wished to write were first coated with a thin layer of wax, and they wrote with the pointed end. The other end was blunt, smooth and somewhat expanded so any mistake could be smoothed out in the wax.

Students know all this, but they really didn't know just exactly what this stylus looked like. They had tried to reconstruct one from the knowledge that they had, but they were not sure of course.

And now one of these old pens has been discovered at Kish and is the oldest pen in existence, being not less than four thousand years old. It is made of bone and is very simple in construction. It is six inches long, with a triangular cross section and pared ends.

Gathering News In Japan Is Difficult

Slow Wire Service Overcome By Using Carrier Pigeons

While there are 19 daily newspapers in Tokio, and hundreds of others throughout the empire, the gathering of news in Japan is somewhat more difficult than it is in other countries. The reason is that the telephone and telegraph service are surprisingly primitive and almost worthless for the rapid transmission of news.

The tardy wire service, however, is overcome to some extent by the use of carrier pigeons. Every news agency and large newspaper has its own specially trained birds which daily are sent by train to the various correspondents. The pigeons, when released with the tiniest of "copy" sheets attached to them, make rapid time back to the editorial rooms.

Have Right of Way

The appearance of a large automobile with a powerful blue light on the front of the canopy over the driver's seat has puzzled many during their jaunts in the West End of London. It is one of two cars used by King George and Queen Mary, and the blue light has solved a problem that puzzled the police authorities for some time. When the King and Queen were returning from a function at night their car was often held up in the traffic. So the blue light was fixed to two of the automobiles. Whenever one appears, no matter what time of the night, it is given right of way, other traffic being held up.

Manitoba Doctors Will Assist

Dr. A. Stobart and Dr. Saint, of the department of agriculture, have left for Charlottetown, Prince Edward Island, where they will spend several months in assisting with the testing of the 120,000 cattle on Prince Edward Island, where a restricted area is being formed for the eradication of bovine tuberculosis.

World's Largest Dam

More than 750,000 pounds of dynamite have been used in building the world's largest rock-filled dam near Bergin, Ky. More than 4,000,000 tons of rock were blasted away.

Indians Did Not See King

Three B.C. Chiefs Wanted to Enter Protest Regarding Lands

"Four figures in tragedy" sailed aboard the Cunarder Auronia from Southampton says the London Evening Standard, describing the departure of the Indians, Basil David, Johnnie Chilliheton, William Pierdah, of British Columbia, and Mrs. Julian Williams, interpreter.

Mrs. Williams said:

"They tell us that the King is on a holiday and cannot see us. The result is that we have simply thrown away a lot of money crossing the Atlantic to see him, but we are not deterred. We shall come again."

The three Indian chiefs went from British Columbia to protest to the King concerning the tenure of their lands and the trapping of game. They claimed certain rights had been taken away from them which were guaranteed to them by the British Government of many years ago.

Canada's Waterpower Industry ..

The latest statistics on the waterpower industry of Canada shows a total installation of 3,570,000 Horsepower, which places Canada next to the United States in the nations using hydro power. The installation of waterpower in the Dominion, based on an estimated population of 9,227,000 is placed at 387 horsepower per 1,000.

His Hat

"You say you've worn this straw hat three years," said the hatter. "Wonderful! It looks like new."

"Yes, three years I've worn it," said the customer. "Once I had it reblocked, twice I got it cleaned and once I changed it in a restaurant for a new one."—Chicago News.

The velocity of the most rapid earthquake waves is 300 miles a minute.

Two Systems Of Government

British Plan Has Many Advantages Over United States

The British system of government has advantages over ours in such matters. When a prime minister gets a report from a commission of his appointing and decides that its recommendations should be carried into effect, he has the assured support of parliament for his policy and can count on its ratifying his proposals for his position as premier is held by reason of the fact that he has a majority in that body which will do as he asks. A report to an American president by a commission he creates, however, leads no further than a suggestion by the executive to the legislative department that its purport should be made law. Congress is not bound to heed such counsel. Often it does not.—Detroit Free Press.

Germans Are Saving Again

Banks Show Increasing Deposits Since Mark Was Stabilized

Recent savings bank figures show that the Germans are beginning to save again and in the past year and a half the number of depositors has grown rapidly. During the inflation period no one in Germany thought of saving money.

It was a policy of either "spend it before it is worthless," or of "get-rich-quick." Gradually, however, with the stabilizing of the mark value, the wisdom of economy has begun to reassert itself. Government officials and brain workers furnish the largest percentage of the depositors.

It is useless to worry; but it is useless to tell a man that it is useless to worry.

Seaweed As A Cure

Contains Iodine Necessary to Prevent Goiter Says Doctor

"The lowly seaweed, 'cussed' by many a pretty girl bather, has come into its own at last, as a protector of the same girl's beauty against the dreaded demon, goiter."

This was the declaration by Dr. J. W. Turrentine, of the United States department of agriculture, in a paper presented before the seventieth meeting of the American Chemical Society, Los Angeles.

Half of the girls living in a belt extending from New York to the Rocky Mountains are afflicted with incipient goiter, Dr. Turrentine said.

"The growing child," Dr. Turrentine added, "should be fed a daily portion of iodine. Goiter is caused by lack of iodine."

"Merely a seaweed diet," he recommended. "Two thousandth of an ounce of dry algae, or seaweed, contains the necessary quantity of iodine. When processed and ground into a flour it can be mixed in every day cooking."

Since the Dawn of Time

A vast treasure of fossils, dinosaur eggs and man-made implements, hidden since the dawn of time, and which may throw new light on life in remote periods, has been dug up and collected from the lonely sands of the Mongolian desert by Roy Chapman Andrews, American paleontologist, and his party, according to a cablegram received in New York.

Satan doesn't object to a man's attending church on Sunday if he gets his services the other six days in the week.

It is hard to make some people believe that the world goes round, because they have never got their share.

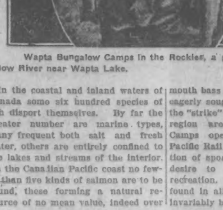
Six Hundred Varieties of Fish in the Rockies

Wapta Bungalow Camps in the Rockies, a popular resort for fishermen. Inset—Cut-Throat Trout from Bow River near Wapta Lake.

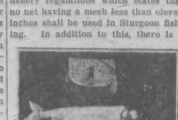
In the coastal and inland waters of Canada some six hundred species of fish disport themselves. By far the greater number are marine types, many frequent both salt and fresh water, others are entirely confined to the lakes and streams of the interior. On the Canadian Pacific coast no fewer than five kinds of salmon are to be found, these forming a natural resource of no mean value, indeed over two thousand persons are employed in harvesting and marketing this one form of sea food.

Throughout the Rockies and Selkirks are several varieties of trout which, though relatively unimportant as a food source, yield excellent sport to the angling fraternity. Sicamous Lake in British Columbia has long been famed as a "good place to fish," in many Ontario streams the small mouth bass and the muskelunge are eagerly sought by men who yearn for the "strike" of a fighting fish. In this region are commodious Bungalow Camps operated by the Canadian Pacific Railway for the accommodation of sportsmen and for those who desire to enjoy a period of quiet recreation. Salmon trout are to be found in all the provinces, these fish invariably being of large size and capable of giving excellent sport to the line fisherman.

Sturgeon are to be found in many of the large rivers of Western Canada, the Nelson and the Big Saskatchewan, with their several lake expansions, yielding annually over one hundred and fifty thousand pounds of this kind of fish. That they attain to enormous size and weight may be readily understood from one clause in the fishery regulations which states that no net having a mesh less than eleven inches shall be used in Sturgeon fishing. In addition to this, there is a further provision that fish of this type under eighteen pounds in weight are to be regarded as "small fry" and, if captured, must forthwith be returned to their native element. The market for sturgeon is so remote and so uncertain that often the supply exceeds the demand. Lacking cold storage facilities, the Indian fishermen are, on occasion, reduced to somewhat primitive methods in order to preserve their unwieldy catch.



Blueback Salmon from British Columbia



Salmon Trout from Lake Minnewanka Banff, in the Canadian Pacific Rockies.

It is perhaps erroneous to refer to the whale as a "fish," yet whale fishing is a regular industry in Canada, the entire area of Hudson's Bay being, so far as whaling is concerned, under control of the Dominion Government. For the information of ambitious "Waltons" who may be eager to land something "Big" it might be stated that a permit to catch whales is issued on application and on payment of the usual fee of fifty dollars.—Dan McCowan.

Modes And Morals

Abbreviation in Dress in Contrast to Earlier Fashions

The relation of modes to morals is one of those questions involved in delicate controversy for which the world has no satisfactory answer.

In nothing, perhaps, are men and women so much the creatures of environment as in the fashion of their clothes. The fact is that it is not so much the amount of clothes a person wears, but the manner of wearing them that defines modesty. The godly men of the Middle Ages found in the unseemly length of women's trains evidences of immodesty and bade them discard the earthly trumpery. The towering starchy ruffs of the Elizabethan age were a mark for the anathemas of the pulpiteers and at a later day the crinolines were a sure sign of moral decay.

Just now the world is running to an abbreviation in dress in sharp contrast to the mode of our grandmothers. To the older generation this tendency may seem to mark a lack of modesty in the age, but to the children of the generation the style has nothing to do with morals or lack of morals, precisely or impurely. Future critics may smile at the lack of taste displayed by the flappers, but, recognizing the university of the fashion, will hesitate to condemn a whole people. We can't all be bad.

Morality or modesty is not a matter of a yard of silk worn here or discarded there. Conduct is a better guide.

It is not what she wears but how she wears it.—San Francisco Chronicle.

What Good Citizenship Means

Showing Lively Practical Interest In Welfare of Others

There are various ways of showing good citizenship, most of them obligatory. To be a citizen in good standing one has to observe recognized laws and customs and transgression of which brings punishment. You must contribute in taxes to the upkeep of the community. You are required to keep your premises in a sanitary condition. In other words, you are required to behave yourself generally. To be a good citizen, however, implies more than mere observance of laws. It means service, self-denial and sacrifice. Good citizenship requires your support of movements that are intended to raise the standard of morality of living and to provide proper and adequate means for the physical training and the entertainment of the boys and girls, the young men and young women of your community. To simply live a passive moral and regular life, you are only doing what you have to do. To do something for the good of others is being a good citizen.—Alymer Express.

The Cost Of Politeness

Child Convinced It Is Not Conducive To Truth

It was not a formal luncheon, and the hostess's small daughter was allowed to sit at the table with the grown-ups. Throughout the meal her behavior was perfect. At last the girl, seated next her, turned to her small neighbor, candy dish in hand.

"Wouldn't you like another chocolate?" she asked.

"No, thank you," replied the child, with a sigh.

Soon after this there was a lull in the conversation, and a little high voice piped up: "Do you know when I tell the most lies?"

The hostess looked apprehensive, and the girl asked indiscreetly: "When, dear?"

"When I'm being polite," declared the child with conviction.—New York Sun.

Paper Mill For Winnipeg

The Backus-Simmen application for a pulpwood berth in Northern Manitoba will be approved by the Federal Government, Hon. Charles Stewart, minister of the interior, stated following a conference in Winnipeg. Mr. Stewart stated that he intended, on his return to Ottawa, to issue a contract immediately. It is the intention of the Backus-Simmen Interests to establish a 250-ton paper mill in Greater Winnipeg.

National Interests

There are many evidences of an awakening sympathy between the peoples of the two extremes of the country, a sympathy that will grow into intimate and useful understanding when more Canadians fully appreciate the desirability of possessing first-hand information about their country—its present and its future.—Victoria Times.

In old times people multiplied on the face of the earth. Now they use adding machines.

Eskimo school children on the Yukon River tuned in on 37 broadcasting stations in a single afternoon.

WORLD HAPPENINGS BRIEFLY TOLD

Cardiff, Wales, is advertising for tenders for 500 wooden houses and expects to get them from Scandinavia.

An expedition has left here to explore the eastern shores of the North Arctic Ocean, proceeding later to Cape Hope, Alaska.

Lieut.-Col. C. P. Mercuth, has taken over his duties as secretary of the League of Nations Society of Canada, succeeding H. G. Richardson, recently resigned.

The delegates of the Empire Press Union, enroute to the Imperial Press Conference, to be held in Australia, were given a civic welcome at Auckland, N.Z.

Professor Henri Louis Bergson, France, has resigned as president of the committee of International Intellectual co-operation of the League of Nations, on account of ill-health.

The Soviet Government, dissatisfied with some of its foreign embassies and legations, is planning a sort of travelling checks which will travel over the world and check up on the diplomats.

It has been announced that all the provinces of the Dominion would be represented in the livestock exhibits at the Royal Winter Fair in Toronto. It was also stated British Columbia would send an exhibit of fruit.

The British Columbia Legislature will assemble for its annual session on October 26. A fall session is preferred by a majority of members of the house to a spring sitting, such as had been postponed earlier in the year.

Senator Webster has been in England making arrangements for the shipment of supplies of Welsh coal to Canada, in case of a coal miners' strike in the United States, the Welsh business will profit very materially by the Canadian trade.

The probe conducted by chief inspector of prisons, A. L. McPherson, into the food served to prisoners in the jails and institutions of Ontario has revealed that there is no general objection to the mush and syrup diet prescribed by the regulations.

Effects Great Saving

New Invention Saves Oil Company 50,000,000 Gallons of Gasoline a Year

"Breathing losses" of gasoline, estimated at 50,000,000 gallons a year by the bureau of mines, are being rapidly cut down by "breathing bags" developed for gasoline tanks by the Standard Oil Company of Indiana, according to a statement made public by the American Chemical Society.

"Breathing losses" are the evaporation of gasoline in tanks due to the sun's heat. This must be allowed to escape from the tank through a vent, otherwise the pressure would injure or destroy the tank.

The Standard Oil invention consists of a balloon which captures the escaping gas during the day and gives it back to the tank at night, so that the same gas is breathed over and over again without loss. The process was worked out by Robert E. Wilson, H. W. Atwell, E. P. Brown and R. W. Cheniek, of the Standard Oil Company of Indiana.

King Presents Colors To Welsh Guards

These Dear Record of War History of Regiment

New colors were recently presented to the Welsh Guards. For the ten years since the formation of the regiment the Welsh Guards have carried colors on which no name of a battle has been emblazoned, but at a picturesque service at Windsor Castle, the King presented them with new colors that are a record of their glorious war history. The King said: "Ten years ago, when your regiment was raised, I presented its first colors at Buckingham Palace. Shortly after that period the regiment was called upon to fight for its country, and today its noble deeds in the Great War are inscribed upon your colors."

Good Fur Catch

The first batch of last winter's furs brought from the Far North by the steamer Distributor, from Aklavik, has arrived at Edmonton and is valued at approximately $1,500,000. Good catches of furs were reported throughout the north.

Walking machines, which can produce in a few hours the amount of wear on shoes that would actually take place in six months of use, are employed for testing the quality of shoes.

A questionnaire recently issued in England shows that religious books stand next to fiction in favor with the reading public.

Wants To Establish Own Medical Register

Irish Free State Has Sounded Death Knell of Profession

The death knell of the medical profession in the Irish Free State has been sounded, in the opinion of many doctors, by an announcement of the government's intention to establish a separate and independent medical register and cut loose from the British General Medical Council, by which the medical faculty of Ireland hitherto has been controlled. The general result of the decision, which is to become effective next February, will be that doctors qualifying in the Free State will be unable to practice in Great Britain or Northern Ireland, while physicians from those places will be barred from Southern Ireland.

The government's decision, however, must be ratified by the Irish Parliament, and medical men, it is stated, will seek to obtain majorities against the proposal both in the senate and Daily Eireann.

President Cosgrave had issued an explanatory statement, seeking to allay the fears of those opposing the bill. admitting there may be temporary disadvantages from the arrangement, he says, the government does not expect any serious reactions.

"It is incompatible with our constitutional status," he adds, "that an important profession have its centre of gravity and disciplinary headquarters in another country."

Reaches Top Record

63,000 Auto Licenses Issued in Saskatchewan This Year

Up to Aug. 12 63,000 private auto licenses ha1 been issued in Saskatchewan, according to report of F. W. Kerr, provincial license inspector. This is an increase of approximately 4,000 over the record number issued in 1924. Truck licenses issued this year to date number 5,000. Mr. Kerr estimated that livery and dealer licenses issued so far would total approximately 1,500 each.

Transferring of licenses from one car to another is another matter which is giving considerable trouble, he said. In changing cars, the owners must secure a transfer of license through the department. The mere transfer of the license plates from one car to another is not sufficient. Persons who do not see to the proper transfer of the license are actually driving the new car without a license Mr. Kerr pointed out.

Many people are under a false impression as to the issuing of half-price licenses, Mr. Kerr said. These are not issued on and after July 1, but any person purchasing a car after October 1 may secure a license at half price, but must furnish an affidavit that the car had not been used in the province prior to that date.

Find Moscow Very Dull

Foreign Envoys Do Not Share Social Life

To relieve the tedium of life among the foreign diplomats and newspaper correspondents, the Moscow Government has adopted the expedient of giving free theatrical entertainments once a month. Early in June a distinguished gathering of ambassadors, consuls and Soviet commissars were the guests of the Soviet Government at a concert given at the State Opera House, which was featured by ballet dances, operatic pieces and vocal solos by Moskwin Russia's best artists. Moscow has not seen such fine limousines since the days of the Czar. The flags of all nations were seen, the French tri-color being especially conspicuous.

It was believed the arrival of Jean Herbette, the new French ambassador, would relieve the dullness that pervades the foreign missions, but the hopes of those who sought greater social activity and gaiety have disappeared. The French ambassador and his wife live modestly at the former house of the Nansen Relief Mission, and already have adopted the quiet, unobtrusive social customs of their colleagues in the diplomatic missions.

Had Learned To Be Brief

A member of the Scottish General Assembly who prides himself in inculcating brevity to the young mind, is telling a good story against himself. His son, who has returned to finish his summer term at an English school, startled, if not gratified, him by a wire as follows: "S. O. S., £.S.D., R.S.V.P."

The lad has now further distinguished himself, in reply to an anxious letter as to his final examination "Hymn 345, verse 5, last two lines," which the anxious parent found to convey, "Sorrow vanquished, labor ended, Jordan passed."—Exchange.

A good reputation is sometimes useful as a parachute to the man who rises rapidly in the world.

There are more than 10,000,000 Baptists in the world.

1046—Men's and youth's shirt; attached or separate collar, and turn cuffs. Sizes 34, 36, 38, 40, 42, 44 and 46 inches breast. Size 36 breast requires 3½ yards of 32-inch or 36-inch material. Price 20 cents.

1139—Men's and youths' union suit; high or low neck, with or without sleeve. Sizes 34, 36, 42 and 46 inches breast. Size 34 is for 32 or 34, size 36 for 36 or 38, size 42 for 40 or 42, and size 46 for 44 or 46. Size 38 breast requires 3¼ yards of 32-inch or 36-inch material. Price 20 cents.

1157—Men's and youth's nightshirt, with or without yoke and fullness at back. Sizes 36, 40, 44 and 48 inches breast. Size 36 is for 34 or 36, size 40 for 38 or 40, size 44 for 42 or 44, and size 48 for 46 or 48. Size 40 breast requires 4¾ yards of 36-inch, or 4¼ yards of 40-inch material. Price 20 cents.

Many styles of smart appeal may be found in our Fashion Book. Our designers originate their patterns in the heart of the style centres, and their creations are those of tested popularity, brought within the means of the average woman. Price of the book 10 cents the copy. Each copy includes one coupon good for five cents in the purchase of any pattern.

Is Comparatively Young Man

Doctor Gye Who Made Discovery in Connection With Cancer Germ Only Forty

Dr. William E. Gye, whose researches and discoveries in connection with the cancer germ have attracted world-wide attention has only recently arrived at his fortieth birthday. Despite his comparative youth, Dr. Gye has already made several valuable contributions to medical science. Some years ago he made a noteworthy discovery in diseases of the nervous system and a little later he came into notice by researches into the poisonous effects of various kinds of dust. The most of Dr. Gye's work has been done in connection with the National Institute of Medical Research, with which he has been connected for several years. He is the son of an English railway laborer, and he himself worked as a railway porter to earn money for his education at the University of Edinburgh. During the war he served with the British Medical Corps in France and Italy.

The Lure of the Undiscovered

Many Of World's Secrets Are Yet To Be Discovered

Lincoln Ellsworth is deservedly honored in Norway as a brave man, a real explorer and the patron whose financial gifts made the Amundsen explorations possible. It is the latter role that may serve to immortalize rich men. There are many of the world's secrets yet to be solved. The Prince of Monaco used to study the ocean, and his work is in a way continued by the wealthy Americans who have contributed to William Beebe's expedition. Western and Central Asia, much of Africa and South America, and both polar caps provide fine hunting grounds for anyone who wants to find out what's what and has funds enough to permit him to do so.—Baltimore Sun.

G. Washington, Jr.

A hardware merchant advertised for a boy. A red-haired, red-faced youth applied for the job.

"Do you like work?" asked the merchant.

"No, sir," said the lad.

"Then you can have the job! You're the first boy who's been here today and hasn't told a lie."

Is Entitled To Crow's Nest Tariff

Calgary Transportation Expert Says Rates Should Apply to Peace River

That the Peace River is entitled to the benefit of the Crow's Nest rates on grain and flour, without further action by the government, is the opinion of William Innes, local transportation expert, and chairman of the transportation committee of the Calgary board of trade.

This opinion puts the present situation in the north in a new light, as the general impression is abroad that reduction of rates to move this year's grain crop on the B.D. and B.C. would be a matter of negotiation between the government and the C.P.R.

"I'm absolutely positive that the Crow's Nest freight rates should apply to the Edmonton, Dunvegan and British Columbia line, as well as to any other in the west," declared Mr. Innes. "I know that the recommendations made by the provincial board of trade who recently met in Edmonton, to the Dominion railway commission, took it simply for granted that the E.D. & B.C. would benefit from the Crow rates just as the other prairie lines." It certainly would be unfair to suggest anything else."

Free Insulin

New Government Policy to be Administered in Alberta

Free insulin supplies will be provided by the Alberta department of health in cases where the patients are not able to otherwise secure them, Hon. George Hoadley, minister of health, announces this as a new government policy to be administered through that department. The minister's attention to the matter was invited a short time ago by the editor of the Hanna Herald, who reported a number of cases in need of treatment but unable to meet the cost. It has now been decided to provide insulin for all such cases making application, and supplies will be sent out from the health department in Edmonton. Each application will be received and dealt with on its merits and necessary investigation as to medical diagnosis and financial circumstances will be made before issuing the supplies. Alberta will in this way be adopting a similar course to that already taken by the province of Ontario.

Canada Interested In Radio

Saskatchewan Stands Second to Ontario in Number of Licenses Issued

Canada spent $5,614,790 on radio sets and parts in 1924.

Public interest in radio broadcasting, and the consequent demand for apparatus has created a new industry. A report issued by the Dominion bureau of statistics shows that production of radio sets and parts in Canada last year amounted to $3,201,102. Total licenses were issued by the department of marine and fisheries during the 12 months ending March, 1925, to 92,596 persons. Ontario led all provinces with a total of 41,847, Saskatchewan took 8,303, Manitoba 6,553, British Columbia 6,409, and Alberta 5,812.

Venice May Lose Isolation

Automobile Road Will Connect Island With Rest of Italy

Loss of the isolation which the city of Venice, as an island, has enjoyed for centuries is threatened by the arrangements which have been completed for the construction of an automobile road connecting Venice with Padua. Later, it is planned to join the road to the Padua-Milan road.

The importance of this project arises from the fact that hitherto the city of Venice has never been joined by road to the rest of Italy, the only communication with the land or by train, crossing by means of a pontoon bridge.

Will Make Another Trial

Amundsen Plans New Polar Expedition For Next Summer

The Aften Posten, Oslo, Norway, states Captain Amundsen, since his arrival home from his recently attempted flight to the North Pole, has been preparing a new aeroplane expedition for next summer, from Spitzbergen over the Pole and unknown Arctic regions to Alaska. The newspaper states financial backing has been assured and the expedition will include Lincoln Ellsworth, who was with Amundsen's party this summer.

Made Productive By Irrigation

Situated in the centre of a district which has changed from a comparatively barren cattle ranging country to a productive fruit raising area by irrigation, Kelowna was the scene of the nineteenth annual convention of the Western Canada Irrigation Association. Delegates from British Columbia, Alberta and Saskatchewan, as well as representatives of the railways, governments, etc., were in attendance.

40—Leap lightly.
41—Fairy (Persian mythology).
44—Juice of a tree.
45—Noise.
47—Exist.
49—Delirium tremens (abbr.).

In Mourning For Sir William Petersen

Ship Will Display Broad Ribbon Mark For Six Months

Montreal has, for the first time, seen a ship in mourning.

It was the Rio Doredr, of the Petersen Line. As she steamed up the St. Lawrence, the now famous "corrugated ship" was conspicuous for a broad blue band painted all about the hull about four feet below the top deck. This ribbon mark formerly was white, and it will remain blue for six months as a mark of respect to the memory of the late Sir William Petersen, head of the line, who died suddenly in Ottawa some time ago while on a visit in connection with the proposed ship subsidy plan.

Captain R. Heckin, who gave evidence before the ocean rate committee in the House of Commons in praise of the "corrugated" ship experiment, is in command. He reported his vessel continues to live up to her records at speed on a 60 per cent consumption of fuel.

Ancient Human Culture

Interesting Discoveries Are Made By Museum Expeditions

Extensive evidence of the human culture in Mongolia 12,000 or more years ago has been unearthed by the third Asiatic Expedition of the American Museum of Natural History, according to a cable from the leader, Roy Chapman Andrews, received by The Asia Magazine.

Among the other results reported are the discovery of 40 dinosaur eggs, ten million years old, dinosaur skeletons and skulls, the pre-mongol human skeletons, remains of ancient animals and a large collection of stone weapons and utensils of the pre-historic dwellers of the Asian plateau.

Has Remarkable Brain

American Now Visiting in London Gives Astonishing Exhibition

Six brains in one are said to be possessed by Mr. Harry Kahne, an American now visiting in London. Simultaneously he will read a newspaper, write the headlines upside down and backwards on a blackboard, at the same time spelling the words the right way; speak continuously to his audience, answer questions given the exact populations and industries of the biggest towns of Great Britain, Canada and the United States; write backwards and upside down columns of figures which totalled 7,125,546,937, a figure previously agreed upon by the audience.

Each Day One Should Eat

Some fruit, either raw or cooked.

Some bulky vegetable, such as lettuce, spinach, carrots or cabbage.

Some laxative food, such as prunes, figs, orange juice or a bran cereal.

All the milk and water one desires, but at least four glasses of water must be taken each day to flush the kidneys.

Slavery Still Practiced

League of Nations Recommends Universal Abolition of System

Slavery is openly practiced in several Asiatic Mohammedan states, particularly in the Arabian peninsula, including the kingdom of the Hedjaz, where many slaves are sold who come from the Far East as pilgrims to Mecca, says a report by the slavery commission of the League of Nations published at Geneva.

The commission recommends universal abolition of the legal status of slavery, and would give every slave the right to freedom without payment of money. It suggests the establishment of a concentration point to which freed slaves may be sent pending their return to the country of their origin and also recommends the extension of the right to the pursue slave dealers.

The league commission suggests the prohibition of compulsory labor except for public works, for which there must be adequate pay.

Metals Can Be Made Thin

New Process Makes Them Transparent As Glass Says Berlin Doctor

Dr. Karl Mueller, of the physical research bureau, Berlin, claims to have discovered a process whereby it is possible to reduce metal foil to a thinness of one-millionth part of a centimetre, while retaining its elasticity. The process, as explained by Dr. Mueller, can be applied to all kinds of metal, including gold, rendering them transparent.

The discovery is hailed there as a great benefit to the telephone, radio and musical instrument industries.

The foils produced by the new process are reported to be as transparent as glass used by oculists, easily permitting a study of the atomic structure of precious metals.

Buried For Seventeen Centuries

The body of Saint Christina the Virgin, buried seventeen centuries ago in the Catacombs of Rome, has been brought to New York. The body will be deposited in the Roman Catholic Cathedral at Cleveland. It was presented to Bishop Joseph Schrembs by the pope in recognition of the generous offerings made through the bishop by his diocese for the erection of the "House of Catacombs" built by the Pontifical Commission on Sacred Archaeology.

YOU Can Be a Professional Man

And Enjoy the Benefits of a Professional Life

Enroll now in our September class and graduate in Chiropractic. Before long you will become a successful practitioner, respected by all and enjoying the confidence of many homes. Full particulars are given in a booklet which will be sent free. Toronto College of Chiropractic, Dept. A, Yonge and Charles Streets, Toronto.

BAREE, SON OF KAZAN

by James Oliver Curwood

A LOVE EPIC OF THE FAR NORTH

Copyright, 1917, by Doubleday, Page & Co.

"BAREE, SON OF KAZAN," a Vitagraph Picture, With Wolf, the War Dog, is an Adaptation of This Story

SYNOPSIS

Pierrot, the halfbreed trapper, and Nepeese, his daughter, were hunting when they saw Baree. Baree was half-dog, half-wolf, but it was the wolf in him that Nepeese saw and fired at, but her aim was bad. Baree had just seen Sekoosew, the cymine, all but kill a partridge, and he himself finished the bird and feasted upon it after he had frightened the ermine away. The dog was only a few weeks old and was having his first exciting adventures.

CHAPTER V.—Continued.

"Uchi Moosis!" gasped Nepeese, in her Cree.

"Diable! A dog—a puppy!" he cried.

He started on a run for Baree. But in their amazement they had lost a few seconds and Baree's dazed senses were returning. He saw them clearly as they came across the open—a new kind of monster of the forests! With a final wail he darted back into the deep shadows of the trees. It was almost sunset, and he ran for the thick gloom of the heavy spruce near the creek. He had shivered at the sight of the bear and the moose, but for the first time he now sensed the real meaning of danger. And it was close after him. He could hear the crashing of the two-legged beasts in pursuit; strange cries were almost at his heels—and then suddenly he plunged without warning into a hole.

It was a shock to have the earth go out from under his feet like that, but Baree did not yelp. The wolf was dominant in him again. It urged him to remain where he was, making no move, no sound—scarcely breathing. The voices were over him; the strange feet almost stumbled in the hole where he lay. Looking out of his dark hiding place, he could see one of his enemies. It was Nepeese, the Willow. She was standing so that a last glow of the day fell upon her face. Baree did not take his eyes from her. Above his pain there rose in him a strange and thrilling fascination. The girl put her two hands to her mouth, and in a voice that was soft and plaintive and amazingly comforting to his terrified little heart, called:

"Uchimoo — Uchimoo — Uchimoo!"

And then he heard another voice; and this voice, too, was far less terrible than many sounds he had listened to in the forests.

"We cannot find him, Nepeese," the voice was saying. "He has crawled off to die. It is too bad. Come."

Where Baree had stood in the edge of the open, Pierrot paused and pointed to a birch sapling that had been cut clean off by the Willow's bullet. Nepeese understood. The sapling, no larger than her thumb, had turned her shot a trifle and had saved Baree from instant death.

She turned again and called:

"Uchimoo — Uchimoo — Uchimoo!"

Her eyes were no longer filled with the thrill of slaughter.

"He would not understand that," said Pierrot leading the way across the open. "He is wild—born of the wolves. Perhaps he was of Koomo's lead-bitch, who ran away to hunt with the packs last winter."

"And he will die——"

"Avoun—yes, he will die."

But Baree had no idea of dying. He was too rough a youngster to be shocked to death by a bullet passing through the soft flesh of his fore-leg. That was what had happened. His leg was torn to the bone, but the bone itself was untouched. He waited until the moon had risen before he crawled out of his hole.

In his humor Baree came, an hour later, out of the heavy timber of the creek-bottom into the more open spaces of a small plain that ran along the foot of a ridge. It was in this plain that Ochoomisew hunted. Ochoomisew was a huge snowy owl. He was the patriarch among all the owls of Pierrot's trapping domain. He was so old that he was almost blind, and therefore he never hunted as other owls hunted. He did not hide himself in the black cover of spruce and balsam tops, or float softly through the night, ready in an instant to swoop down upon his prey. His eyesight was so poor that from a spruce top he could not have seen a rabbit at all, and he might have mistaken a fox for a mouse.

Even if Baree could have seen under the dark brush, and had discovered Ochoomisew ready to dart from his ambush, it is not likely that he would have gone very far aside. His own fighting blood was up. He, too, was ready for war.

"Baree had not killed, but he had conquered."

Very indistinctly Ochoomisew saw him at last, coming across the little open which he was watching. He squatted down. His feathers ruffled up until he was like a ball. His almost sightless eyes glowed like two bluish pools of fire. Ten feet away, Baree stopped for a moment and licked his wound. Ochoomisew waited cautiously. Again Baree advanced, pausing within six feet of the bush. With a swift hop and a sudden thunder of his powerful wings the great owl was upon him.

In the stillness of night there rose a still greater thunder of wings, and for a few moments Baree closed his eyes to keep from being blinded by Ochoomisew's furious blows. But he hung on grimly, and as his teeth met through the flesh of the old night pirate's leg, his angry snarl carried defiance to Ochoomisew's ears. Rare good fortune had given him that grip on the leg, and Baree knew that triumph or defeat depended on his ability to hold it.

Suddenly Ochoomisew ceased his beating and launched himself upward. Like huge fans his powerful wings churned the air, and Baree felt himself lifted suddenly from the earth. Still he held on—and in a moment both bird and beast fell back with a thud.

Under those wings Baree's mind worked with the swift instinct of the killer. Suddenly he changed his hold, burying his fangs into the under part of Ochoomisew's body. They sank into three inches of feathers. Swift as Baree had been, Ochoomisew was equally swift to take advantage of his opportunity. In an instant he had swooped upward. There was a jerk, a rending of feathers from flesh—and Baree was alone on the field of battle.

Baree had not killed, but he had conquered.

CHAPTER VI.

Baree's night with Ochoomisew was good medicine for him. It not only gave him great confidence in himself, but it also cleared the fever of ugliness from his blood. He no longer snapped and snarled at things as he went on through the night.

He was still a wanderer—pupamoo-tao, the Indians call it. It is this "wander spirit" that inspires for a time nearly every creature of the wild as soon as it is able to care for itself—nature's scheme, perhaps, for doing away with too close family relations and possibly dangerous interbreeding. Baree, like the young wolf seeking new hunting grounds, or the young fox discovering a new world, had no reason or method in his wandering. He was simply "travelling"—going on. He wanted something which he could not find. The wolf-note brought it to him.

The stars and the moon filled Baree with a yearning for this something. The distant sounds impinged upon him his great aloneness. And instinct told him that only by questing could he find. It was not so much Kazan and Gray Wolf that he missed now—not so much motherhood and home as it was companionship.

Baree did not travel far that night. The fact that his wound had come with dusk, and his fight with Ochoomisew still later, filled him with caution. Experience had taught him that the dark shadows and the black pits in the forest were possible ambuscades of danger. He was no longer afraid, as he had once been, but he had had fighting enough for a time, and so he accepted circumspection as the better part of valor and held himself aloof from the perils of darkness. It was a strange instinct that made him seek his bed on the top of a huge rock up which he had some difficulty in climbing.

(To be continued)

Age and Riches

Money Valuable Only as It Contributes to the Abundance of Life

On his 99th birthday a Seattle man gets word that he has just inherited $3,000,000. Is he rich? Answer this by asking yourself if you would trade places with him. Which would you rather be—penniless and 20 or millionaire and 99?

After all, life itself is the only real wealth. Money is valuable only as it contributes to the abundance of life.

Youth and health are valuable because they contribute to the same abundance. Age is valuable if it means the lived wisdom of experience. What youth anticipates age remembers.

Both of them "have" it and both are good. Ninety-nine years means richness of life lived and still possessed. Twenty means richness of life yet to be gained.

Money is, at best, a minor tool or either.—Vancouver Sun.

King Is Outdoor Enthusiast

Does Routine Work in Garden of Buckingham Palace

King George has become more of an outdoor enthusiast than ever. Early in the spring he had a specially fitted summer house placed in the gardens of Buckingham Palace, where he carried on his routine work in the unusually warm weather which London experienced through June and early July this year.

In other years during the hot weather the King used a tent in the Buckingham Palace gardens, but the new summer house is a great improvement over this, having electric lights and telephone connection with the palace, about 100 yards away.

Much of the King's business is transacted before he has his breakfast; consequently his servants are among the earliest risers of London.

Some seem to think the only way to be happy though married is to be single though married.

BETTER IN EVERY WAY

After Taking Lydia E. Pinkham's Vegetable Compound

Ingomar, N. S.—"I took your medicine for a run-down condition and inward troubles. I had pains in my right side so bad at times that I could not walk any distance. I saw about Lydia E. Pinkham's Vegetable Compound in the newspapers and have taken five bottles of it. I am better in every way and you can use my letter to help other women." — Mrs. ALVIRA M. PERRY, Ingomar, N. S.

Nervous Breakdown Relieved

Toronto, Ontario.—"It is pretty hard to explain your feelings in nervous troubles. I felt low spirited, had pains in my head and eyes, always crying, and did not want to go anywhere. I do knitting and fancy work, and I would get irritable after a few minutes of work. I have been in Canada five years and have been this way ever since I came. I am taking Lydia E. Pinkham's Vegetable Compound and I sleep better and it seems to make me eat, and I must say I am feeling more jolly. I have great faith in your medicine because of what it has done for my husband's sister and she recommended it to me." —Mrs. A. SMITH, 10 Burleigh Avenue, Todmorden, Toronto, Ontario.

All druggists sell this dependable medicine, and women suffering from these troubles so common to their sex should give it a trial now.

Had Remarkable Career

Negro Potato King, Once a Slave, Dies Rich

From slavery to riches was the achievement of J. G. Groves, known as the "Negro Potato King of Kansas," who died near Edwardsville, Kas., recently.

He was 86 years old. Groves was born in slavery in Green County, Kentucky, in 1853. When the slaves were freed he learned to read and write, and in 1879 came to Kansas, where he worked on a farm at 40 cents a day. Later the owner of the farm rented Groves 10 acres of ground. At his death he owned a 522-acre farm, besides 1,600 acres of wheat land.

Groves' title of "Potato King" came from the success he had in raising potatoes. In one year on 295 acres he produced 72,150 bushels of white potatoes.

THE ONE SURE WAY TO GOOD HEALTH

Is Keeping the Blood Pure By Using Dr. Williams' Pink Pills

Impure, weak blood is the cause of most of the troubles that afflict people. This is the cause of the wretched feeling of languor and faintness, pains in the back and side, headaches and breathlessness, that afflict women and make her daily life a torture. To get new health and strength the blood must be enriched. What Dr. Williams' Pink Pills do in cases of this kind is told by Mrs. Augusta Emery, Medford Station, Alta., who says: "Living on the prairie, and knowing that there are thousands of women there as well as miles away from a doctor, I want to tell them what Dr. Williams' Pink Pills have done for me. After my first baby was born I seemed to have little energy. I felt weary and run-down and unable to do even the ordinary household duties. I felt I needed a tonic and as I had long seen Dr. Williams' Pink Pills advertised I decided to try them. I got a supply and carefully followed the directions and before very long the result was wonderful. Day by day I regained my former strength and enjoyed life. I recommend to give me a keen appetite and I gained in weight and soon was able not only to do my work about the house, but to help with many chores on the farm. For this reason I would advise women, particularly those on the prairie or the farm, to keep a supply of these pills always on hand. One trial will convince you of their worth. I have recommended them to many of my friends and never have they failed to produce good results."

You can get these pills from your druggist, or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

"John," said Farmer Brown, "if you don't mind, I wish you'd eat off by yourself instead of with the summer boarders."

"Why, dad, ain't my manners good enough for 'em?"

"Tain't that, John, but your appetite sets 'em a terrible example."

The most obstinate corns fail to resist Holloway's Corn Remover. Try it.

South African Native Ancient Human Type

Anatomists Greatly Interested In Find At Capetown

South Africa has yielded another cranial curiosity which is attracting the scientific attention of anthropologists almost equal to that aroused by the discovery early this year of a fossilized skull at Taungs, Bechuanaland, described at the time as representing something midway between man and the great apes.

When the body of a native was dissected at the anatomical school of Capetown University, it was found to have a typical "Boskop" skull, virtually identical with that discovered in the Transvaal in fossil form in 1913 and traced to the ice age of probably 25,000 years back.

Anatomists emphasize the interest and importance of the recurrence of a type of man hitherto unknown except in fossil remains.

Why They Are Upright

"Most people, they say, are rarely guilty of meanness or crime.

Well, you see, it's so difficult for them to stoop to anything low.

House dogs often are instrumental in spreading tuberculosis, measles, smallpox, scarlet fever and diphtheria, says Dr. Misao Inamidea.

Minard's Liniment for Corns and Warts

Power From Subterranean Steam

Harnessing Reservoirs of Heat in Interior of the Earth

With the rapid dwindling of the world's natural resources in stored fuel—coal, oil and gas—engineers and scientists in recent months have been turning to the problem of tapping and harnessing the vast reservoir of heat in the interior of the earth.

The latest plan, and one of the most elaborate, developed by Rudolf Lammel, a German engineer, is described in the September issue of Popular Science Monthly. It proposes drilling two shafts, one straight, the other with a number of rectangular bends, to a depth of three miles. This depth is about 2½ times that of the deepest shafts ever drilled. Both shafts lead to a large subterranean chamber cut out of solid rock.

If we estimate that with every 100 feet downward the temperature rises one degree Centigrade, the temperature of the walls of that chamber will be approximately 320 degrees Fahrenheit. At a depth of three miles the air atmospheres, are about 20 pounds to the square inch. The boiling point of water under this pressure would be 214 degrees Fahrenheit, more than 80 degrees lower than the temperature of the chamber.

From a reservoir on the surface, water is sent down through a pipe that follows the bends and turns of the stepped shaft to the chamber at the bottom. As the water rushes downward, it becomes gradually hotter, and at a depth of nearly two miles it turns to steam, which is forced into the chamber by pressure of the column of water above. In the high temperature of the chamber the steam is superheated and expanded. It seeks an outlet through the straight shaft.

Reaching the surface, the superheated steam is distributed first to the turbines of a light and power station, then to various industrial establishments and to residences and public buildings where it is used for heating purposes.

The energy to be derived from a plant of this description, of course, depends on the volume of water obtainable. Assuming that a constant flow of 12 cubic yards a second is obtainable, as it is in many existing hydraulic power plants, the potential energy made available by heating that volume of water to 320 degrees Fahrenheit would be equal to nearly 3,000,000 kilowatts a day, representing an economic value equal to 70,000 tons of good coal a day.

This Speedy West of Ours

In the days when Western Canada was booming, it was said that towns grew so fast that they were preparing hundred thousand dollar fires before the outside world was aware of their existence. And now stock raising on the prairies is developing so rapidly that the government is organizing to prevent the depredations of cattle thieves before the east generally is alive to the fact that the farmers have gone in extensively for mixed farming.—Financial Post.

Relief From Asthma. Who can describe the complete relief from suffering which follows the use of Dr. J. D. Kellogg's Asthma Remedy? Who can express the feeling of joy that comes when its soft and gentle inhalations relieve the tightened, choking air tubes! It has made asthmatic affliction a thing of the past for thousands. It never fails. Good druggists everywhere have sold it for years.

Destroy London's Stray Animals

Fifteen Hundred Cats and Dogs Electrocuted Every Week

During the past 13½ years 437,429 cats and 317,218 dogs have been painlessly put to death at the headquarters of the Animal Rescue League in City Road, Islington, E.C., and the rate is now about 1,500 per week.

The executioner-in-chief, as she humorously describes herself, is an elderly woman, Miss Clegg, who, as the manageress, superintends the destruction of the animals as they are brought to her from all parts of London in the motor ambulances, all women over 50 years of age, who scour defined districts every day for unwanted cats and dogs.

The animals are killed by electrocution, death being instant. The cats are laid in the drawer of an apparatus resembling a table, with only the fatal switch on top; and the dogs, before receiving the current, are fitted with a collar connected with a swivel, through which the current passes.

In a recent race between an aeroplane and carrier pigeons from Miller Field, N.Y., to Washington, D.C., the plane beat the pigeons by two hours and forty-one minutes.

MINARD'S "KING OF PAIN" LINIMENT

In photographing stars through the telescope, exposures of four or five hours are common, while in photographing a nebula the exposure sometimes extends to ten hours or more.

All mothers can put away anxiety regarding their suffering children when they have Mother Graves' Worm Exterminator to give relief. Its effects are sure and lasting.

Wife.—Fritz complains of a headache. He had better see the doctor.

Husband.—Nick nothing. He's always complaining of headaches.

Wife.—But this is the first time he has done so on a school holiday.

Minard's Liniment for Aches and Pains

"Why on earth do you come to me for a testimonial?" asked the governor of the prison.

"Because, sir," explained the applicant, "you are the only man who can say truthfully that you've known me for two years and never seen me under the influence of drink."

Joe MacFadyen met with a painful accident while engaged at his work at the Brick and Coal plant last monday. He got his hand caught in some of the machinery and had two fingers badly lacerated. Dr. Patterson dressed the wounds and later took Joe to the Medicine Hat hospital where it was found necessary to amputate part of the two injured members.

GORDON MEMORIAL UNITED CHURCH

The Board has everything in readiness for the "Every Person Canvass" which will begin on Monday, Oct. 5th and be completed on Saturday, Oct. 10.

The willing Workers Mission Band met on Monday with 22 members present, to begin the new year of work. The officers elected were Francis Buckheitz, President; Helen Matheson, Planist; Martha Bulmer, Secretary; Robert Stratton, Monitor; Hugh Matheson, Treasurer. The Board is preparing a cantata "Dream of Fairyland" to be definitely advertised later.

Owing to the storm on Sunday morning the attendance at Rall Day Service, was not as large as expected, however, the program was well rendered. The pageant, "World Fellowship," given by the C.G.I.T. groups, deserves special mention. The offering amounted to $18.00.

TRADE TREATY BECOMES EFFECTIVE OCTOBER 1

It is estimated that Alberta farmers will receive at least $200,000 less in cream checks this coming winter when the Australian trade treaty providing for a reduction of three cents a pound import duty on butter becomes effective October 1. The treaty was passed at the last session of the federal parliament and will be proclaimed by both the Austrlian and Canadian governments to become effective on October 1.

Three new plant creations, a new type of sweet corn and new varieties of the aster and rose, have been created by Luther Burbank, plant scientist. The corn specimen perfected by Burbank is much more productive than any he has produced, he stated.

Straw Paper Industry Possible for Alberta

Experiments by Government Experts Have Proven Successful

As a result of successful experiments in the making of paper and paper products from waste straw in Alberta, which have been conducted under the auspices of the provincial government, the government is now making an effort to interest capital in the proposal to establish a plant or plants in the province.

The government expresses confidence in the success of such an enterprise, and states that the results of the experiments made have been of the greatest importance not only to the farmers but to the general industrial development of the province.

A special report on the experiments has been made by Trade Commissioner Stutchbury, to Premier Greenfield.

Investigations were made into all known experimental processes for the manufacture of pulp from straw, and finally about two years ago the government made arrangements for laboratory tests of the Roche-Wile process in the Pulp and Paper Division of the Forest Products Laboratories, Montreal, under the joint supervision of Mr. E. Parke Cameron, the Superintendent of the Division, and Mr. John Roche-Wile, who was co-inventor with his father in the process.

As a result of the success which attended the tests carried out in Montreal, the Alberta Government employed a well known pulp and paper engineer to make a local survey of the conditions which were necessary for the commercial success of a plant in this Province.

An exhaustive report on these subjects has been received by the government covering a number of points in the Province. This report together with all technical reports is being placed at the disposal of groups of capital who may be interested in the development of this important industry.

The homeward trek of easterners who have been engaged in the harvest fields of the prairies, continues. More than 300 weather-beaten and sunburned workers have passed through Winnipeg in the last week or so.
